

PATIENT INTAKE SOLUTIONS

Pre-Registration

The registration process is a healthcare organization's first impression with patients, and it's usually not a good one. Paper-reliant systems are slow, cumbersome, disengaging, and create frustration for patients and staff. Traditional registration processes are not just a drag on workflows – they're expensive to operate and delay revenue.

PATIENT INTAKE SOLUTIONS

Pre-Registration

TRANSFORM YOUR REGISTRATION PROCESSES

We digitize the entire patient intake process, making it fast, fluid, and friendly. There's no need to print and scan – forms are generated and managed electronically, fully integrated with EHRs. Patient information from the EHR automatically populates the registration form, so returning patients need only verify and update. Patients can pre-register from home, reducing on-site registration to mere seconds.

PATIENT INTAKE BY INTERLACE HEALTH

How it Works

Interlace Health integrates with your HIM or PAS system and generates the appropriate forms for each patient. The patient completes the registration on a computer or tablet, either at home or on-site, and signs forms electronically. The eSignature is HIPAA compliant.

All patient data is then securely filed in your EHR and easily accessed. The system applies the bar codes and can also print a wristband if needed. Errors are virtually eliminated.

Significantly reduce patient wait times and staff involvement

Pre-registration significantly reduces the clerical time spent on each and every patient. Nurses and staff can be reduced or redirected to other areas of patient care.

Accelerate revenue with pre-arrival co-pays

Patients know and pay their co-pays or outstanding balances before they arrive. This feature alone is worth the transition to Interlace Health, as it is proven to accelerate revenue and reduce staff time collecting it.

WHY IT'S BETTER

Seamless Integration

Our Patient Intake Solution works with existing EHR, payment service, email/texting platforms and approved mobile hardware.

Enhanced Operations

Providing patients with a more efficient way to complete admission forms will lead to better clinical data and a greater percentage of patients who pre-register for treatment.

Manage Risk & Liability

Collecting data from patients in advance allows for preventative actions to be taken that can avoid surgery cancellations and/or rescheduling, which often present financial challenges and potential patient safety risks.

Reduced Overhead Cost

Immediately eliminate pre-printed forms and stop bleeding money on ink for forms printed in-office.
