

Smart Tiles

Smart App From Anodius Developers

Creating new records, especially those that have many fields, can be time-consuming. In addition, re-filling in the same fields with the same data can often be frustrating. With this application, you can now make it easier to routinely and repeatedly fill in fields when inserting new records in Salesforce.

SMART TILES dynamically and predictively fills in the fields you select in the object.

ADVANTAGES

LESS TYPING - LESS ERRORS

With Smart Tiles you no longer have to fill in the same fields repeatedly, App will do it intelligently and comfortably for you. It will save you not only time but also a few mistakes. You can use it on both standard and custom objects.

SAFETY

As a user, you can create and use only those Smart Tiles and their fields to which you have access according to the defined structure and permissions. There is no need to create new permissions on the objects affected by the use of the application. You will only need to have access to the Smart Tiles application as such.

#AND' AI

With our predictive algorithms in the background, the system will offer you anticipated options and give you a choice. The choice of objects and fields that the system pre-fills you is up to you. You can also modify them later.

BE SMART, BE EFFICIENT

Not only can you choose from the Smart objects and tiles you have created, but you can also have the ones created by someone else and offered to the whole organization.

SO WHAT DO YOU GAIN?

Hours and hours saved, reduced error rate and higher data quality, more space for business development. Especially suitable for frequent or many records with repeating fields or a large number of fields. You can also make Smart Tiles available to your customers or external collaborators in community portals.
