OVERVIEW

AC Ideas Enterprise is the most powerful and comprehensive idea management application for Salesforce Community Cloud.

This will help you to understand the needs of your customers better and get the most valuable feedback.

Do they want to suggest something new? Would they like to improve anything they already use? This component is what you need. Engage your customers within a community and let them generate new and unique ideas using AC Ideas Enterprise.

Main features:

1. Sort ideas by trending, popular, recent and oldest
2. Filter ideas by category, status, and some other fields
3. Search ideas support on Global Search (using separate component)
4. Create new ideas
5. Custom fields support
6. Vote and comment on existing ideas
7. Multiple communities support
8. Auto status update
9. Display a list of similar ideas on the Idea detail page
10. Reputation points support
11. Ideas subscription support
12. Email notification support
13. Moderation tools
14. Archiving ideas
15. Two-level categories hierarchy
16. Configurable status colors
17. Flagging support

You can configure the following features using Component settings in Community Builder:

- set Idea's Zone name for retrieving Ideas by Zones
- set component title (visible in "Default" layout only)

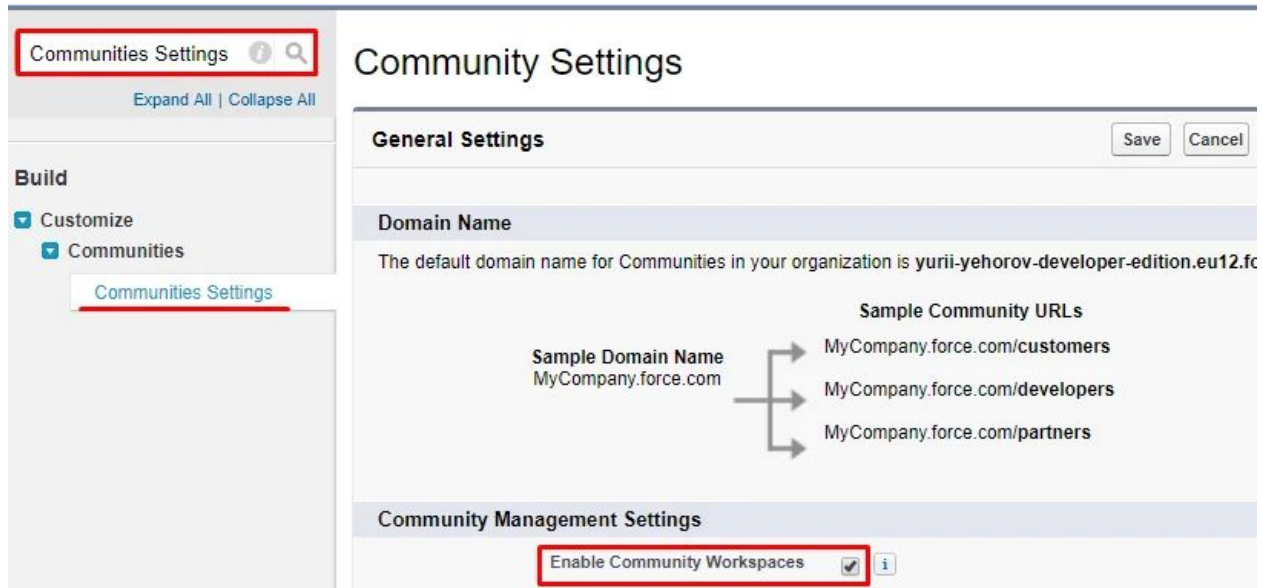

- set default items order
- set number of items per page
- choose categories source for category filter
- make filter lists collapsed by default
- display ideas numeration or not
- disable the link to user profile page if required

Don't forget to click "Publish" to save your changes each time you change Component settings in Community Builder.

INSTALLATION

Prerequisites:

- Communities should be enabled in setup:
(Setup – Quick Find / Search box – Communities Settings – Enable Community – Domain name – Save)

- At least one SF Community should be configured
- Internal org domain required (Setup – Company Settings – My Domain)
- At least one idea zone with the mandatory name “TestPublic” should be configured (see [Set up Ideas Zones](#))

Install Community Ideas package from the AppExchange or use the direct installation link if you have one.

CONFIGURATION

Our component uses standard SF Idea object, so please make sure you familiarize yourself with standard Ideas Salesforce Documentation.

Set up Permissions

AC Enterprise Ideas component comes with custom objects and fields. In order for the component to function properly, you need to provide appropriate access to these objects and their fields.

You can provide access in two ways:

- 1) Assign a user an appropriate permission set that comes with the package:

AC Ideas Enterprise Admin for admins or moderators

AC Ideas Enterprise User for community users

IMPORTANT!

AC Ideas Enterprise is based on the standard Salesforce Idea object. Due to the Salesforce rules, permission sets that come with packages DON'T grant access to standard objects.

In this case, for using permission sets, do the following:

- Clone existing AC Ideas Enterprise Admin and AC Ideas Enterprise User permission sets;
- Add appropriate access for admins and users to the Idea object as mentioned in the table below.

- 2) Set up user profiles according to the table below.

Please, note! When configuring object settings using the Enhanced Profile User Interface, you may notice doubled names for Ideas and Ideas Flags.

It's not a bug!

For Ideas, the first one is a standard object and a second one is a custom tab!

Both need to be configured.

As for Ideas Flags, it is a custom object that requires configuration and an additional custom tab, that requires no configuration.

Apex Classes Access

According to the Salesforce access restriction to @AuraEnabled Apex Methods for Guest and Portal Users, provide access for external users (including guests) to the following Apex Classes:

acideas.brCustomCategoriesController
acideas.brCustomCategoryCreateFormController

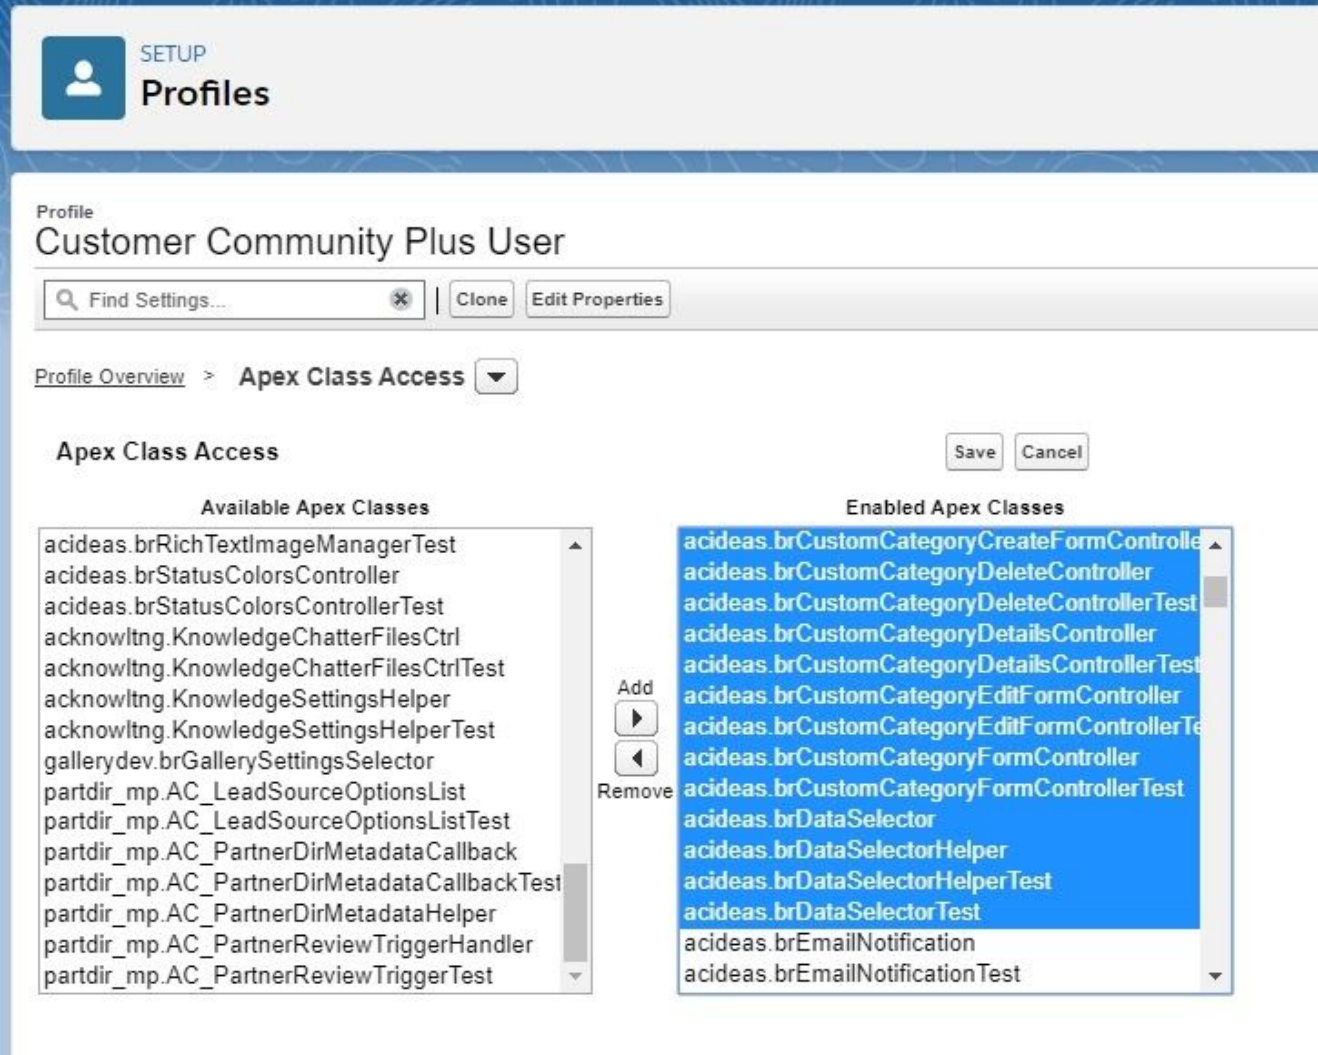

acideas.brCustomCategoryDeleteController
acideas.brCustomCategoryDetailsController
acideas.brCustomCategoryEditFormController
acideas.brCustomCategoryFormController
acideas.brFieldWrap
acideas.brGlobalInfoController
acideas.brGlobalSearchResultController
acideas.brIdeaCommentDeleteController
acideas.brIdeaCommentsController
acideas.brIdeaCommentWrap
acideas.brIdeaCreateFormController
acideas.brIdeaDeleteController
acideas.brIdeaDetailsController
acideas.brIdeaEditController
acideas.brIdeaFormController
acideas.brIdeasCommonSettingsController
acideas.brIdeasListController
acideas.brIdeasListFilterController
acideas.brIdeasListItemController
acideas.brIdeasModerationSettingsController
acideas.brIdeasModerationUtils
acideas.brIdeaStatusController
acideas.brIdeasZoneSettingsController
acideas.brIdeaUnsubscribeController
acideas.brIdeaVotesListController
acideas.brIdeaWrap
acideas.brLexIdeasController
acideas.brLexIdeasSettingsController
acideas.brMergedIdeasListController
acideas.brRelatedIdeasListController
acideas.brStatusColorsController
acideas.brStatusUpdateRulesController
acideas.brTestFieldWrap
acideas.brUserDisplayNameController
acideas.brUserInfoController
acideas.brFilesManager

To set Apex class security from a profile:

1. From Setup, enter Profiles in the Quick Find box, then select **Profiles**.

We recommend using the Enhanced Profile User Interface to see the full list of available Apex classes!

2. Select a profile.
3. In the Apex Class Access page or related list, click **Edit**.
4. Select the Apex classes that you want to enable from the Available Apex Classes list and click **Add**.

The screenshot shows the Salesforce 'Profiles' setup page for the 'Customer Community Plus User' profile. The 'Apex Class Access' section is active, displaying two lists of Apex classes. The 'Available Apex Classes' list includes items like 'acideas.brRichTextImageManagerTest' and 'acideas.brStatusColorsController'. The 'Enabled Apex Classes' list includes items like 'acideas.brCustomCategoryCreateFormController' and 'acideas.brDataSelector'. Between the lists are 'Add' and 'Remove' buttons. 'Save' and 'Cancel' buttons are located at the top right of the section.

Custom Settings Access

AC Ideas Enterprise uses Custom Settings. To make this data visible for users on the community, provide them with the read access to the following custom settings:

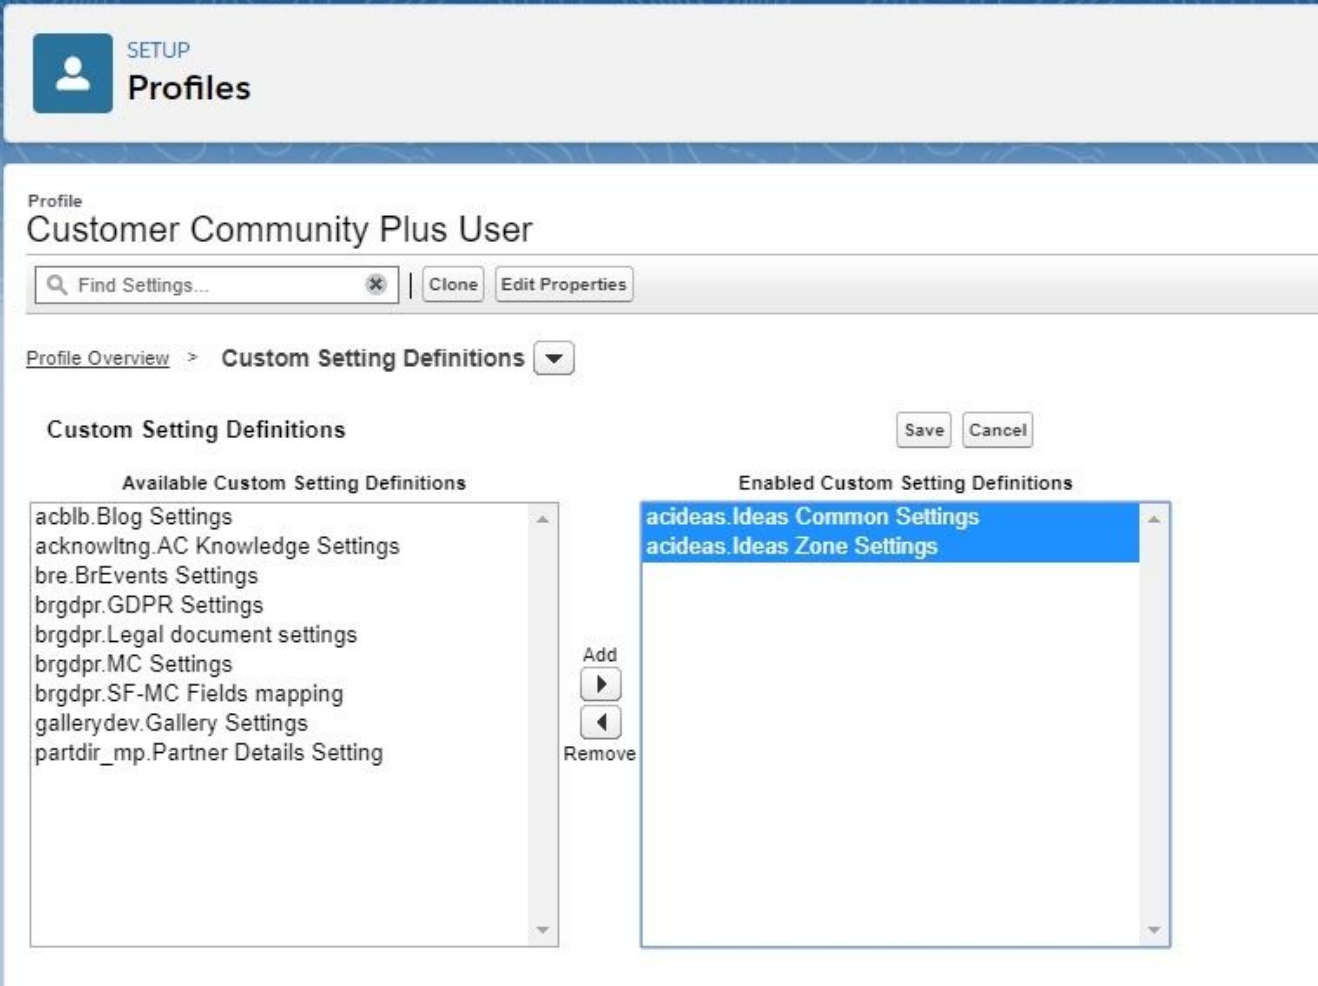

acideas.Ideas Common Settings
acideas.Ideas Zone Settings

Only users with Customize Application permission can provide access to custom settings.

To grant a specific profile or permission set read access to custom settings:

1. Search for Profiles or Permission Sets from Setup, then click the name of the profile or permission set.
2. Click the **Custom Setting Definitions** permission.
3. Click **Edit**, add the custom setting to the Enabled Custom Setting Definitions list, then click **Save**.

Guest users

In order for an external user who is not logged in the community to see the list of Ideas, you need to do the following:

- 1) Go to the Community Builder Settings tab – choose General section – click Guest User Profile;
- 2) Found Standard Field-Level Security section – click “View” next to Idea;
- 3) Click “Edit” – enable “Read access” for Archived field – Save.

Set up Ideas Zones

Important!

Create a mandatory Idea Zone with the name “**TestPublic**” and assign it to the community. It is necessary for running apex tests and for the correct component functioning.

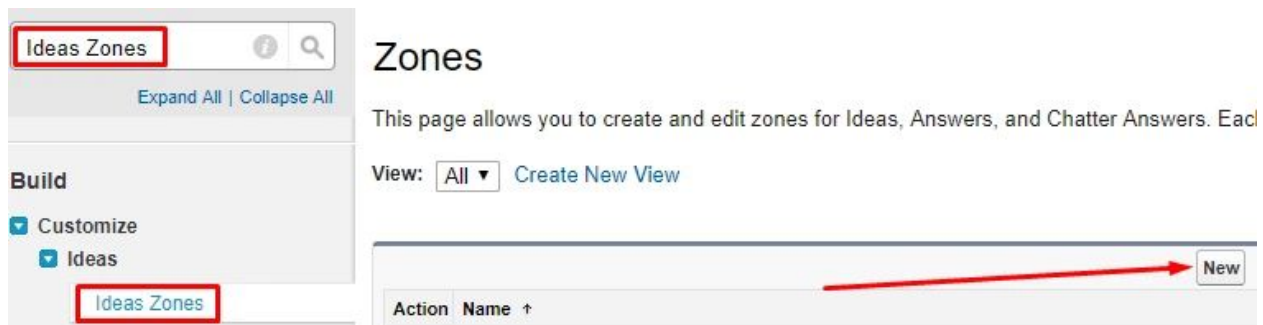

To set up Ideas Zones use Salesforce Classic Interface.

Ideas Zones are used for separating different sets of Ideas. You only need to set up the Ideas Zones:

- If you are using Ideas on a community and internally (to collect Ideas from your employees, for example)
- If you have two or more communities with different sets of Ideas

To create Ideas Zone, go to:

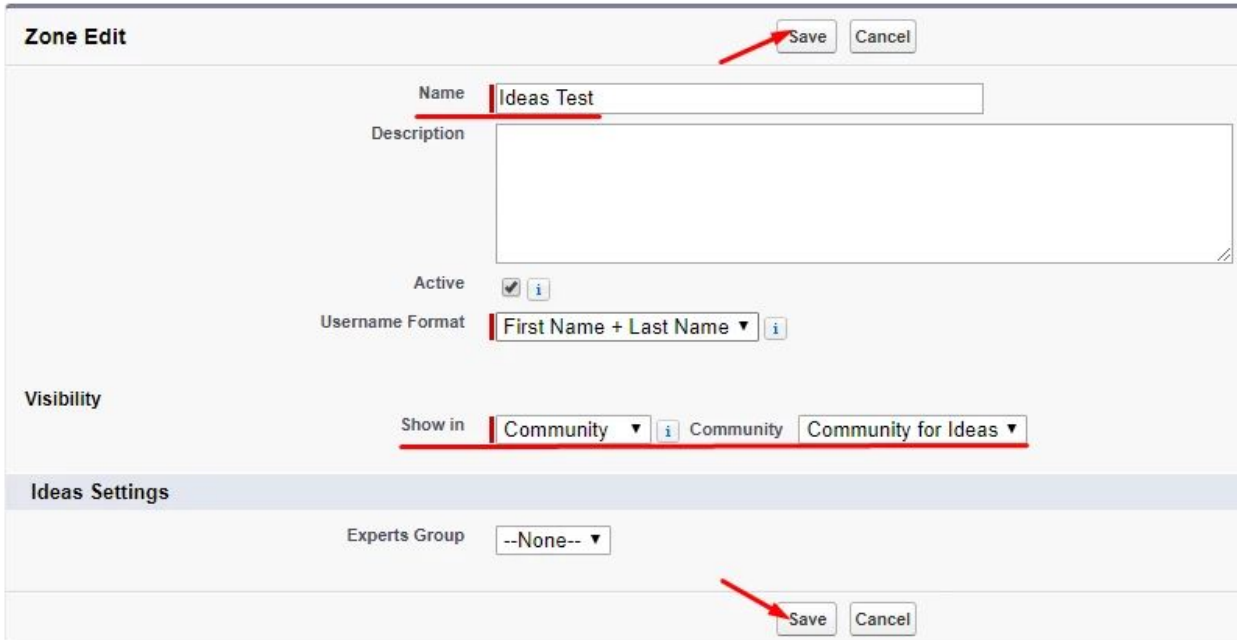

1. Setup – Quick Find / Search – Ideas Zones – click New.

2. Fill the Name, optionally add a description. Enable the “Active” checkbox and choose the username format you want to be displayed in this Zone. Fill the Visibility section. From the drop-down list, choose the community which this Zone will be shown in. Click Save.

Zone Edit
Ideas Test

Customize the settings for your zone.

The screenshot shows the 'Zone Edit' interface for a zone named 'Ideas Test'. The interface is divided into several sections: 'Zone Edit' (top), 'Name' (text input), 'Description' (text area), 'Active' (checkbox), 'Username Format' (dropdown), 'Visibility' (dropdowns), 'Ideas Settings' (dropdown), and 'Experts Group' (dropdown). The 'Save' and 'Cancel' buttons are located at the top right and bottom right of the form. Red arrows point to the 'Save' buttons. The 'Name' field contains 'Ideas Test'. The 'Active' checkbox is checked. The 'Username Format' dropdown is set to 'First Name + Last Name'. The 'Visibility' dropdowns are set to 'Community' and 'Community for Ideas'. The 'Experts Group' dropdown is set to '--None--'.

Set up Ideas Categories and Statuses

To set up Ideas Categories and Statuses use Salesforce Classic Interface.

You can use Categories and Statuses for filtering the Ideas on the community.

To create Ideas Categories, go to:

1. Setup – Quick Find / Search – type Ideas - choose Fields – click Categories.
2. Categories Picklist Values – click New.
3. Add categories for your Ideas component (each category on a separate line) and choose an appropriate Zone.
4. Click Save.

COMMUNITY BUILDER

Set up Community Pages

Important: you don't need to set up community pages for ideas if Idea object pages have been created previously.

For using Ideas components within the community, you need to create Idea object pages (Idea List, Idea Detail). Follow the steps below to create them:

1. Pages menu – New page – Object page.
2. Choose object Idea – Create – Publish your changes.

New Object Pages

Select an object to create the detail, list, and related list pages associated with it.

Email Message

Idea Subscription

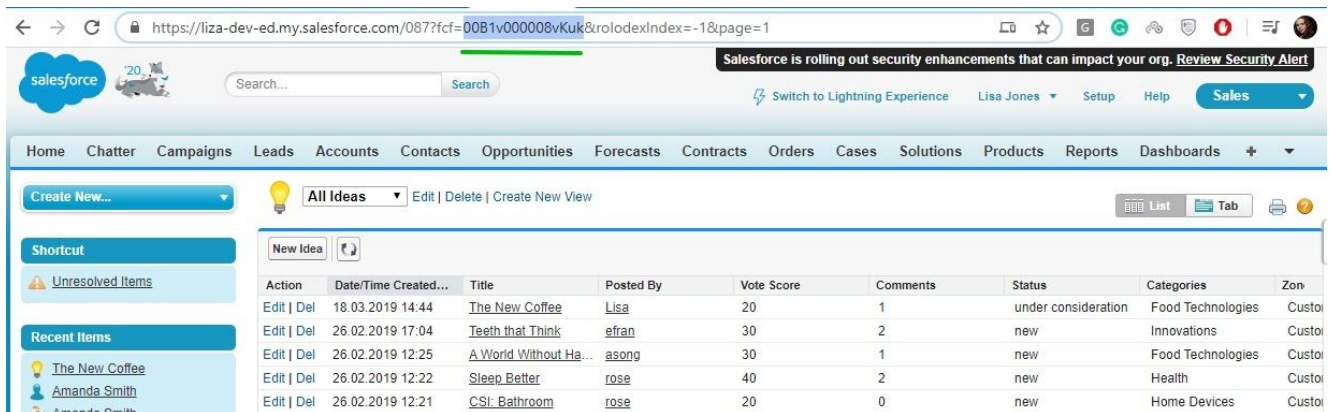

To make the page available for community users, add it to the Navigation menu. Take the following steps to do this:

1) Navigation Menu – Navigation Menu window.

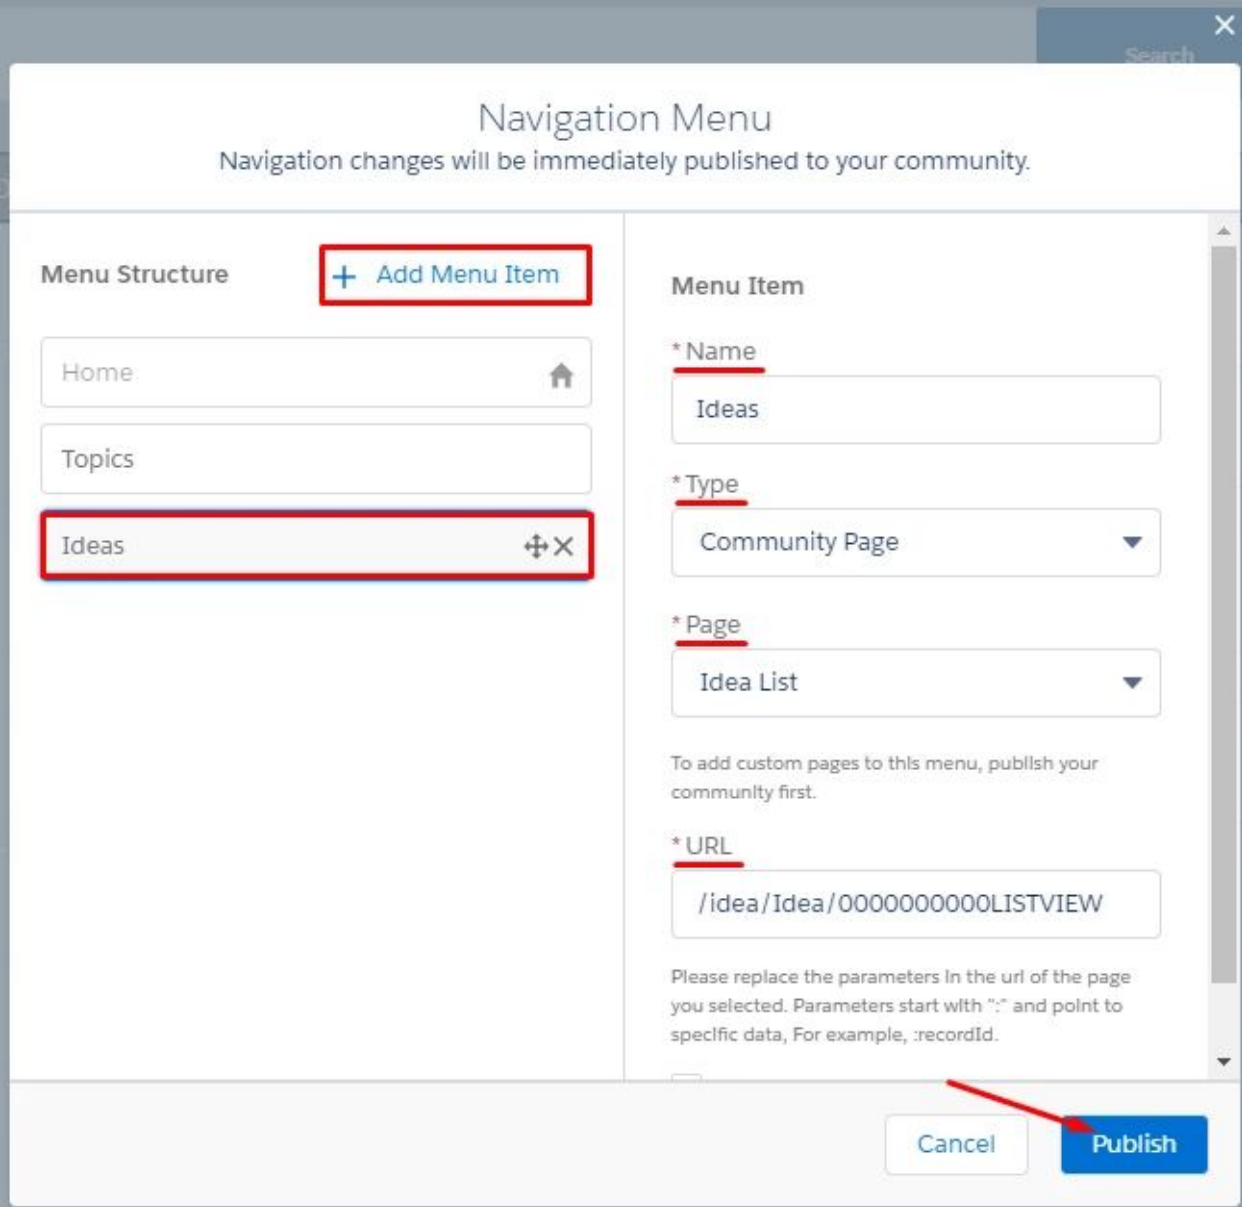

2) Click “+ Add Menu Item” – Enter the Name; Type: Community Page; Page: Idea List.

3) Copy an appropriate list view ID on the standard (classic) Ideas tab address bar.

4) Past it into the Ideas Navigation page URL field using the following format:

/idea/Idea/LIST_VIEW_ID

Navigation Menu

Navigation changes will be immediately published to your community.

Cancel **Publish**

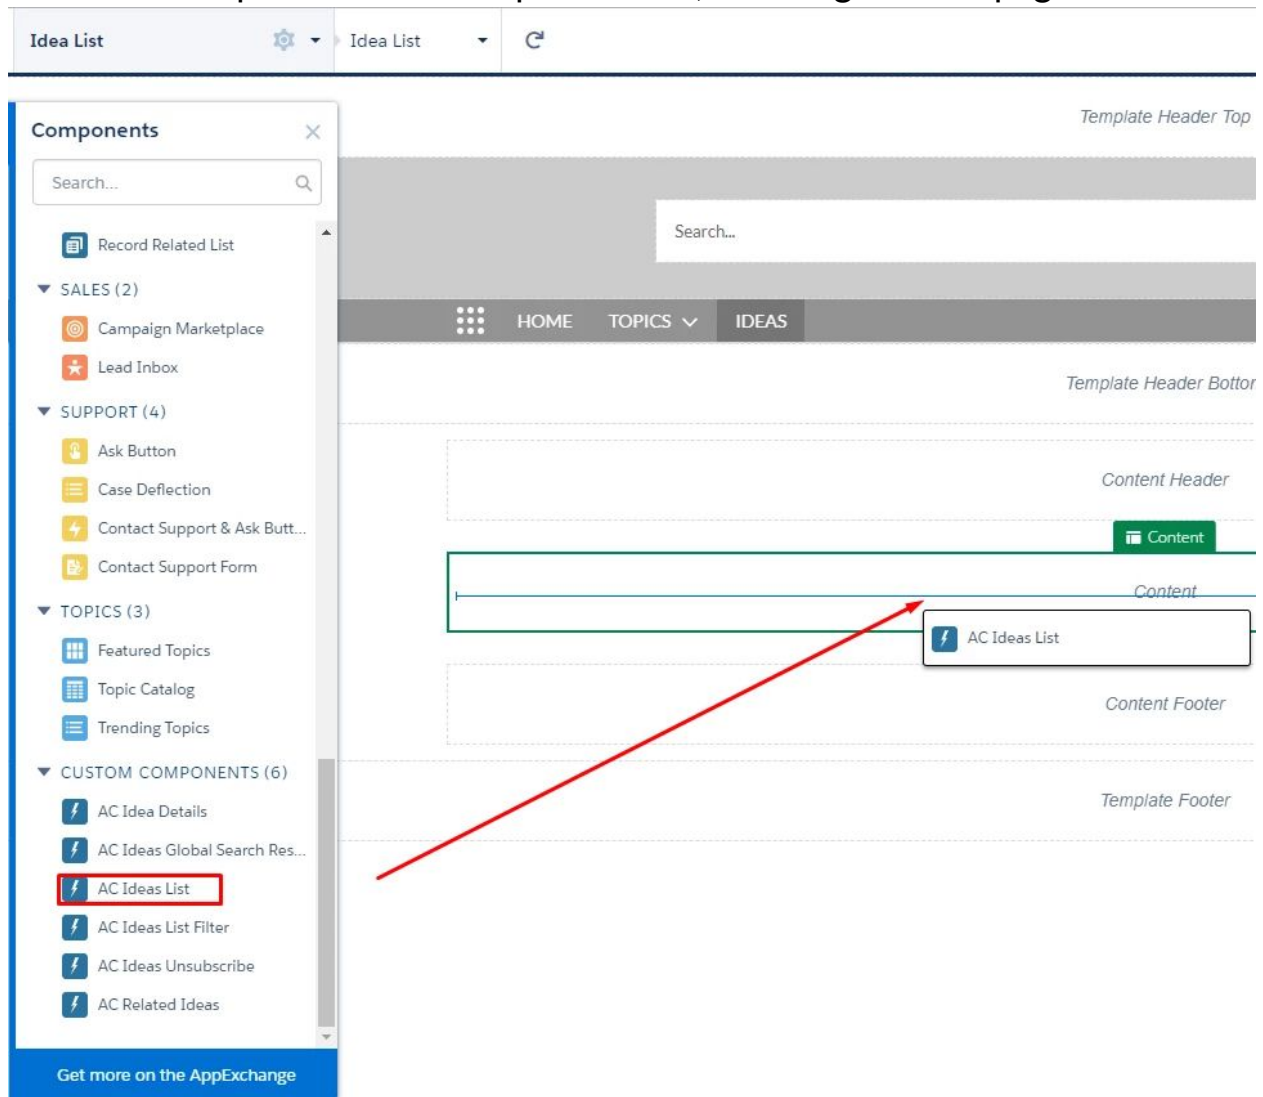

5) Publish your changes.

AC Ideas List Component

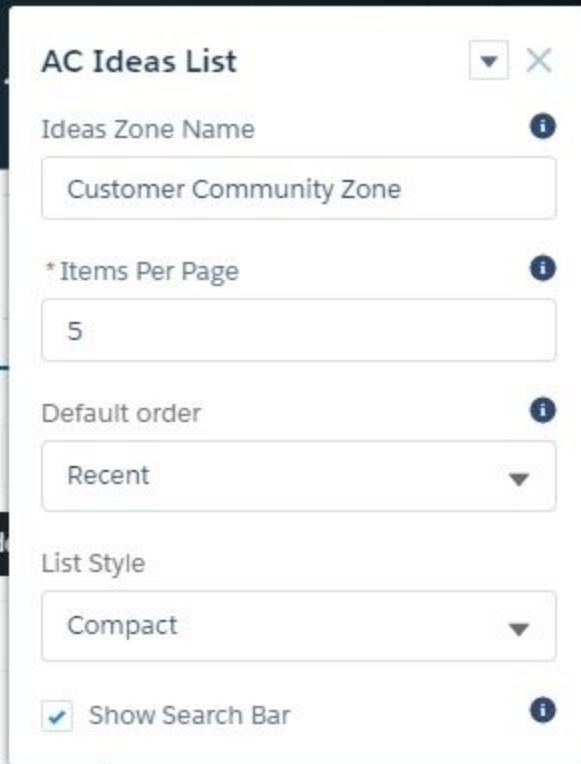

This is used on the Ideas List page and displays a list of published ideas.

Add a component to the page:

1. On the “Idea List” page, click on the components tab to find the **AC Ideas List** component in the drop-down list, and drag it to the page canvas.

2. Open the Properties box by clicking on the component. Here you can manage Ideas Zone Name, the number of items per page and the default order of ideas. Choose a full or compact style of the Ideas list. You can also enable the Search field. Publish your changes.

The screenshot shows a configuration panel titled "AC Ideas List" with a close button (X) and a dropdown arrow. It contains several settings:

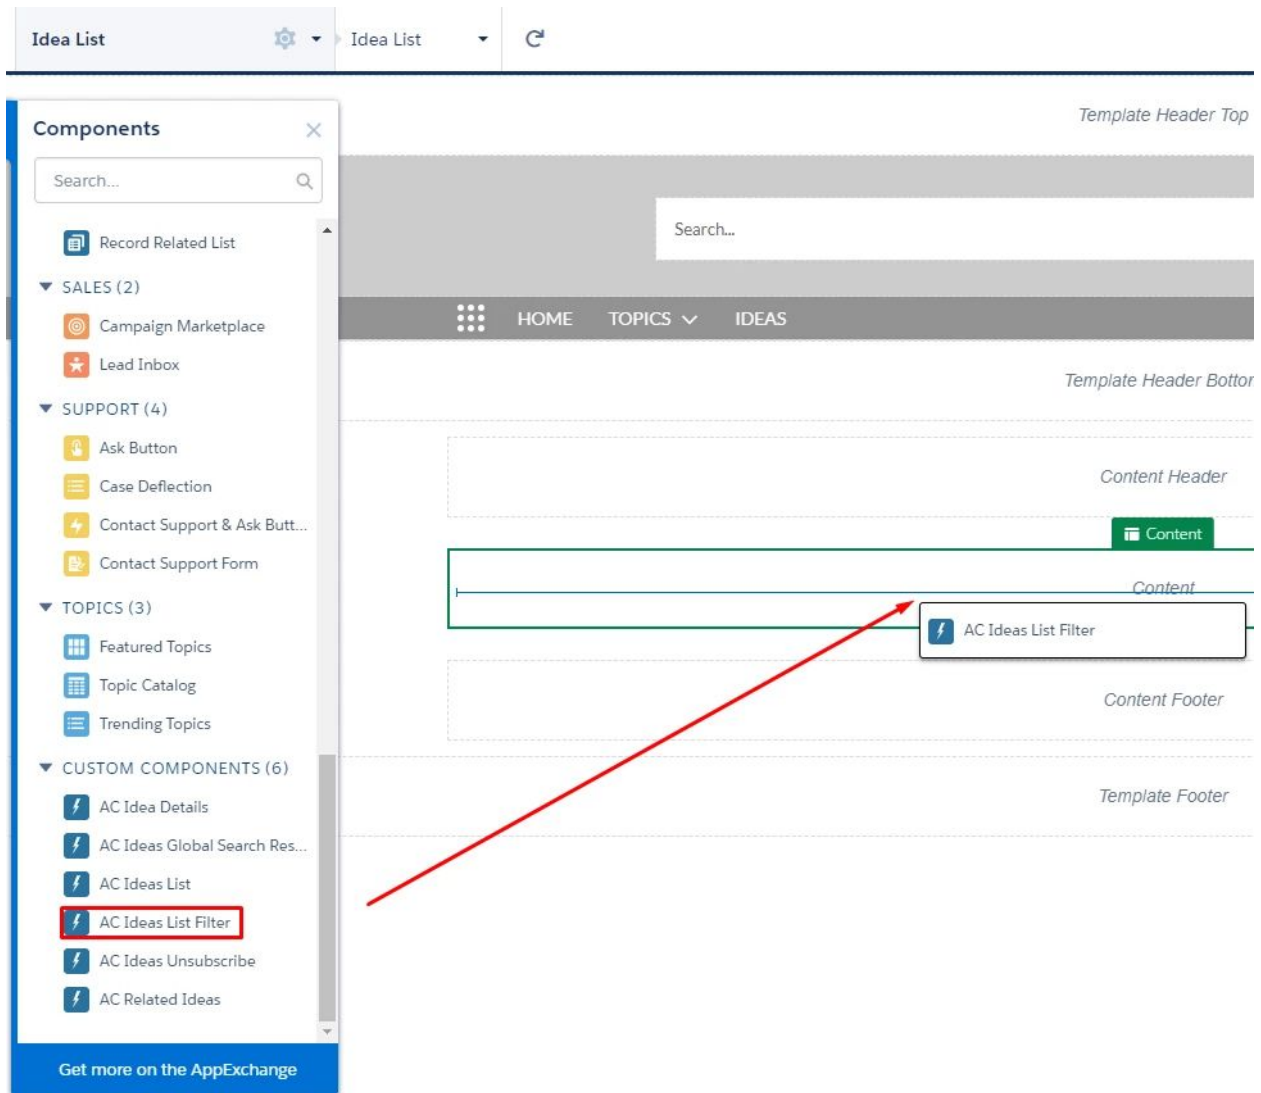

- Ideas Zone Name:** A text input field containing "Customer Community Zone".
- * Items Per Page:** A text input field containing "5".
- Default order:** A dropdown menu currently set to "Recent".
- List Style:** A dropdown menu currently set to "Compact".
- Show Search Bar:** A checked checkbox.

AC Ideas List Filter Component

This serves to filter existing ideas by categories and statuses. It can be added to the sidebar on the **Idea List** page.

Add a component to the page:

1. On the “**Idea List**” page, click on the components tab to find the **AC Ideas List Filter** component in the drop-down list, and drag it to the page canvas.

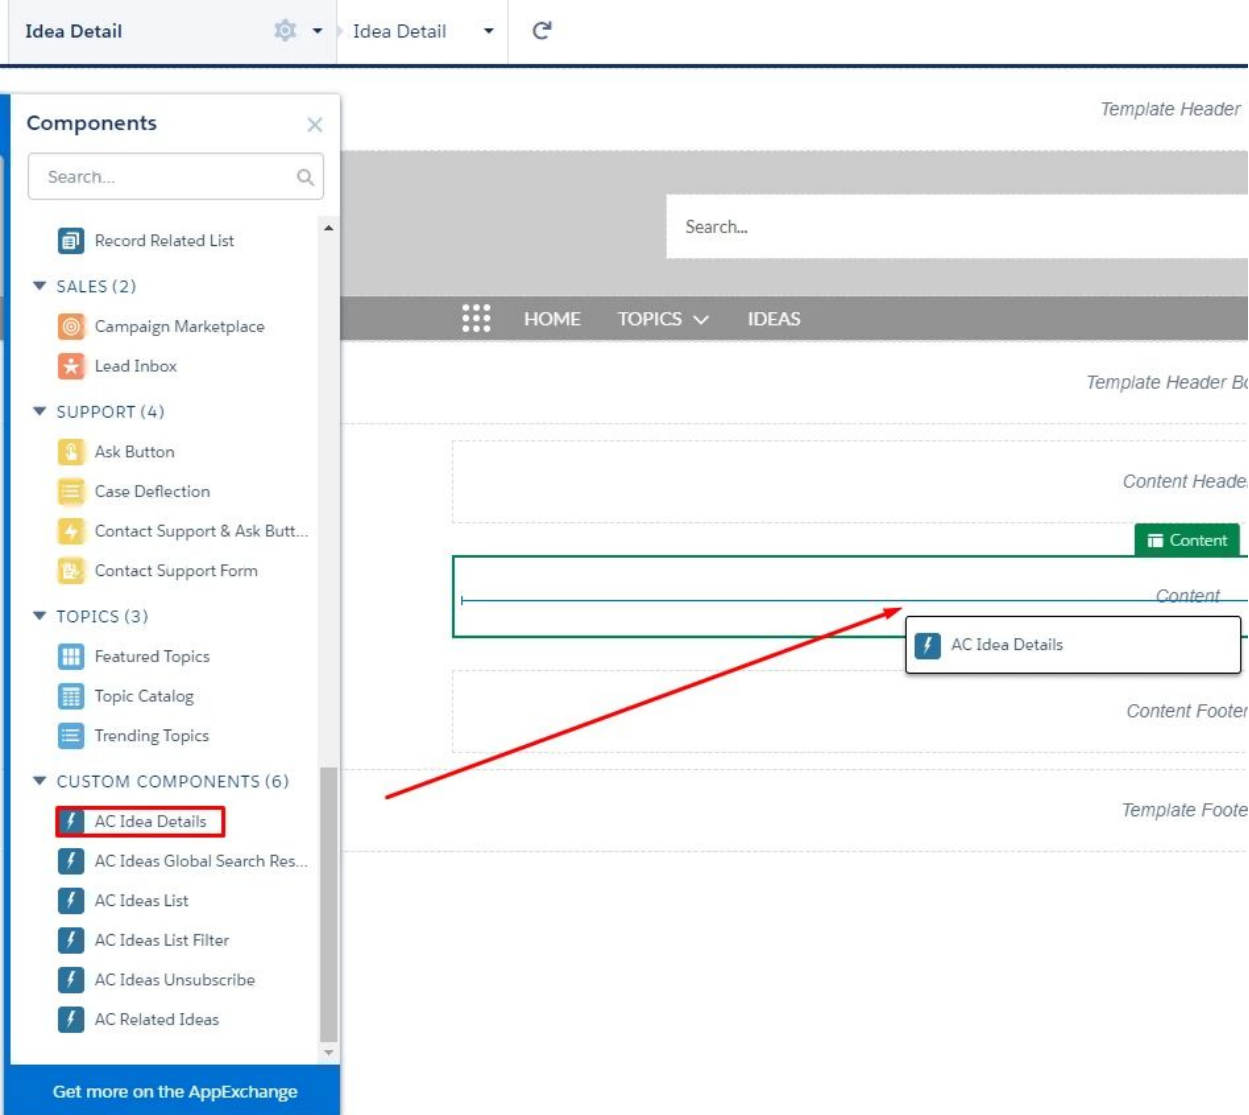

2. Open the Properties box by clicking on the component. Here you can manage Ideas Zone Name and default filter groups order. You can also make filter groups expanded. Publish your changes.

AC Idea Details Component

Add a component to the page:

On the “**Idea Detail**” page, click on the components tab to find the **AC Idea Details** component in the drop-down list, and drag it to the page canvas. Publish your changes.

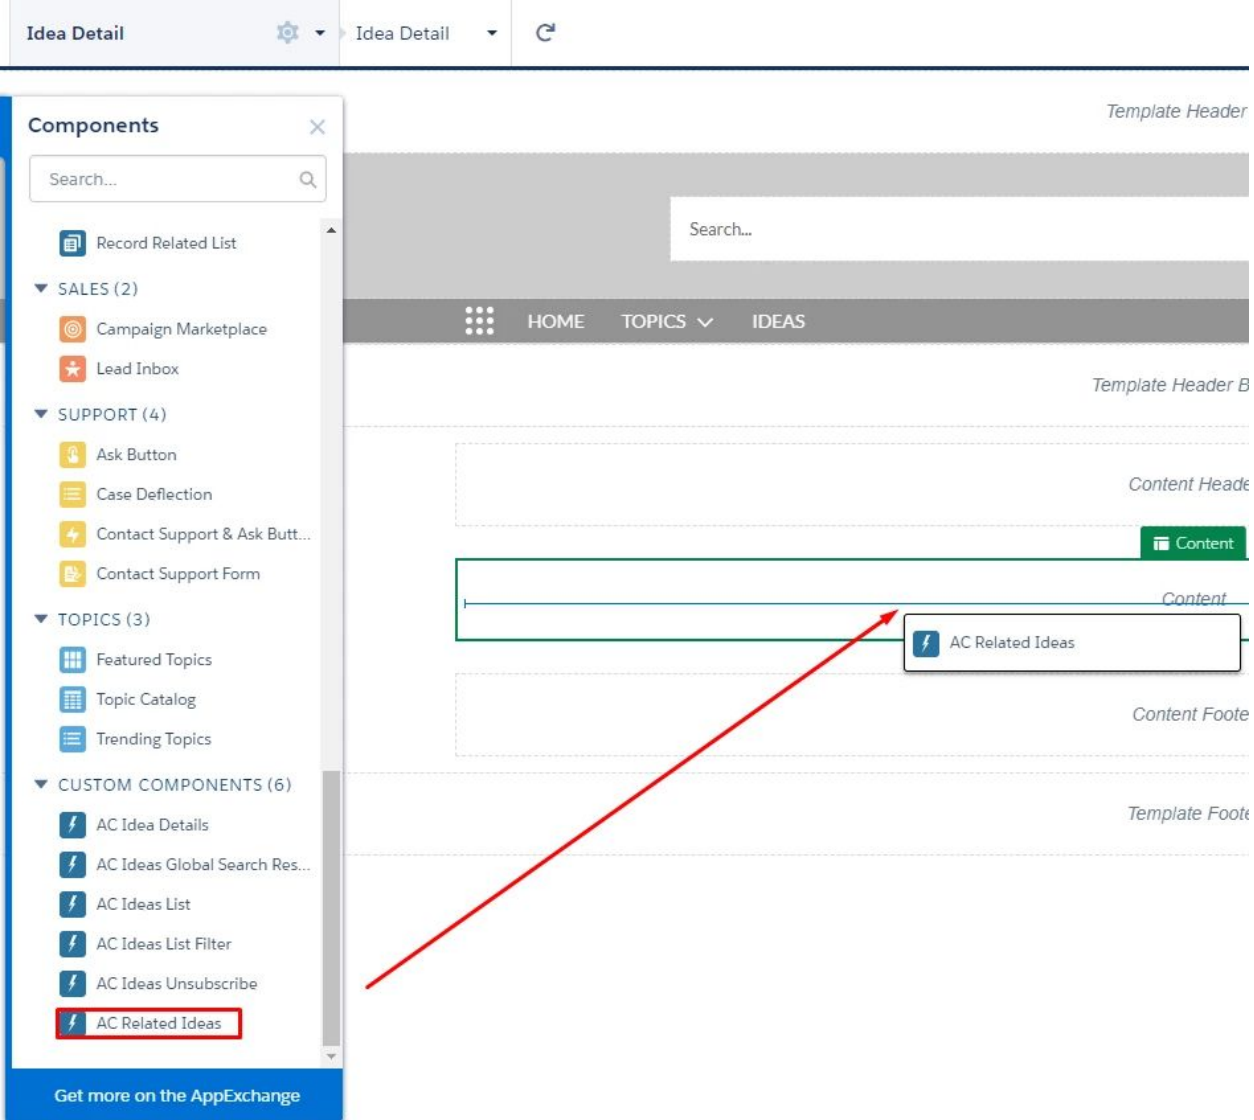

AC Related Ideas Component

It displays a list of similar ideas on the detail page.

Add a component to the page:

On the “**Idea Detail**” page, click on the components tab to find the **AC Related Ideas** component in the drop-down list, and drag it to the page canvas. Publish your changes.

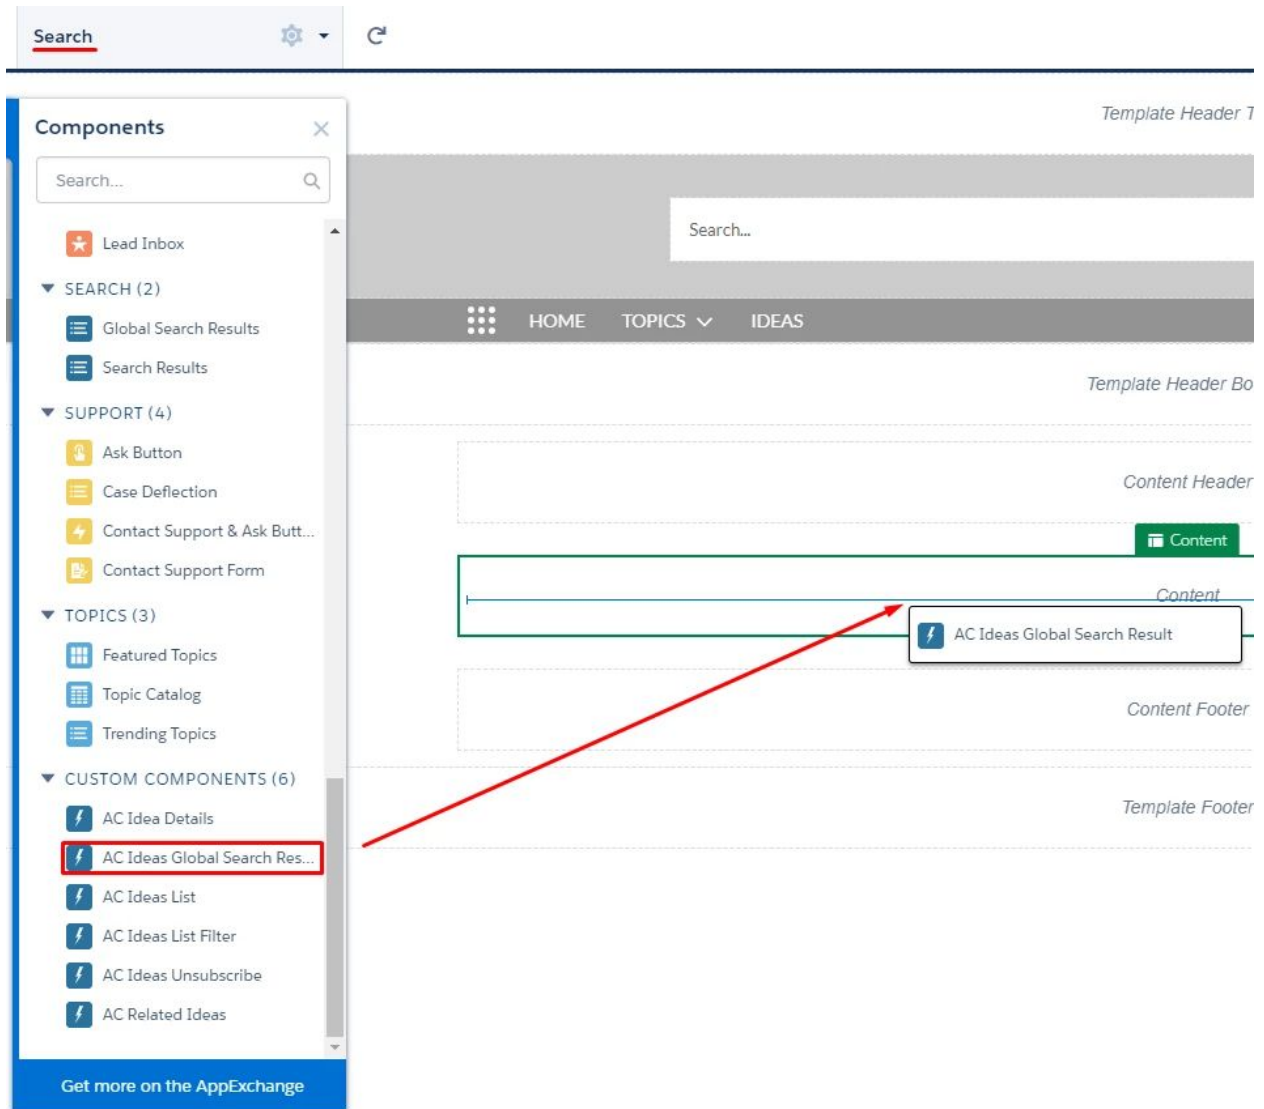

The screenshot shows the 'Idea Detail' page in the Advanced Communities interface. On the left, a 'Components' sidebar is open, listing various components under categories like SALES, SUPPORT, TOPICS, and CUSTOM COMPONENTS. The 'AC Related Ideas' component is highlighted with a red box. A red arrow points from this component in the sidebar to its placement in the main content area, which is a white box with a lightning bolt icon and the text 'AC Related Ideas'. The main content area is part of a template layout with sections like 'Template Header', 'Content Head', 'Content', and 'Template Foot'.

AC Ideas Global Search Result Component

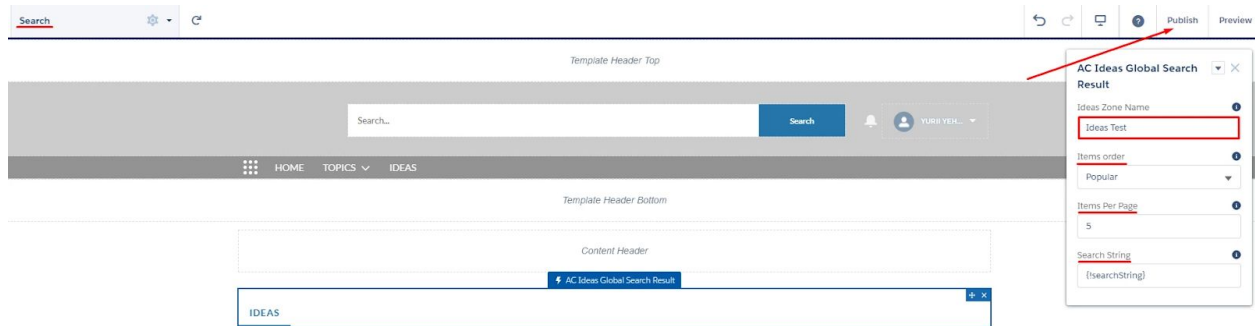

This helps users searching for Ideas across the community. It has to be added to the standard **Search** page.

Add a component to the Search page:

1. On the **Search** page, click on the components tab to find the **AC Ideas Global Search Result** component in the drop-down list, and drag it to the page canvas.

2. Open the Properties box by clicking on the component. Here you can manage Ideas Zone Name, the default order of ideas, the number of items per page and the search string. Publish your changes.

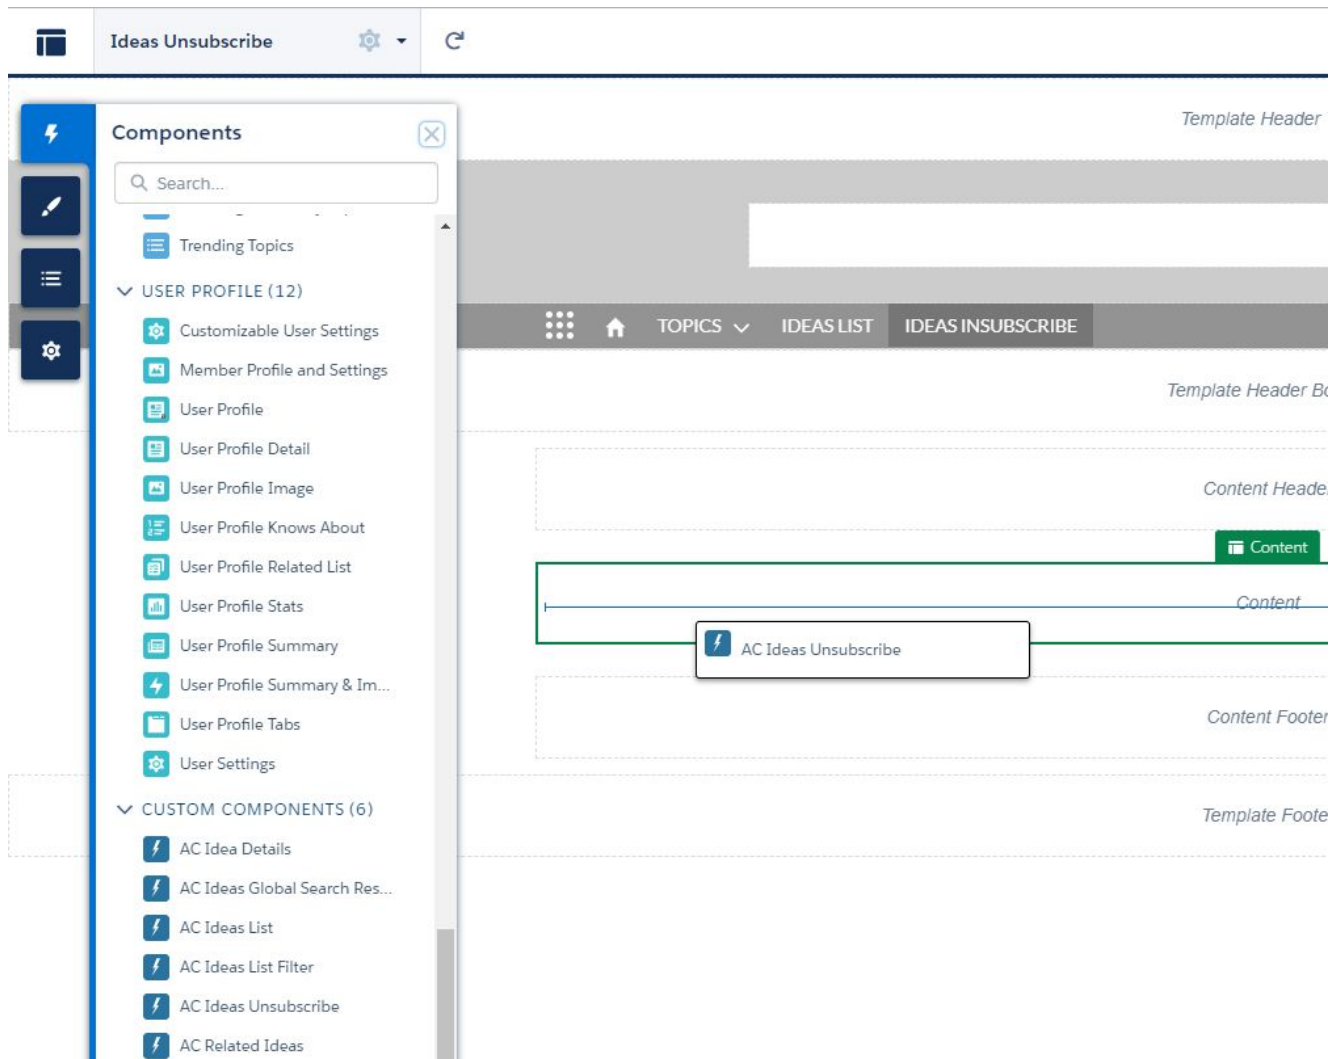

AC Ideas Unsubscribe Component

AC Ideas Unsubscribe component is used to unsubscribe from one or all ideas at once by clicking on the link in the email.

1. Add a component to the page:

Create a standard page in the community builder. Click on the components tab to find the **AC Ideas Unsubscribe** component in the drop-down list, and drag it to the page canvas.

The component has no properties in the community builder.

2. Update email templates for Ideas Enterprise in the organization

Go to the Organization Setup - Classic Email Templates - AC Ideas Enterprise folder.

Update the following email templates for subscribers:

- IdeaOfficialAnswerChangeToSubscriber
- IdeaStatusChangeToSubscriber

- NewCommentNotificationToSubscriber

Open the template and edit HTML Version. The Text Version can be copied from the HTML one.

Replace the example.com/support in the template body with the community URL.

 SETUP
Classic Email Templates

The New Coffee

Food Technologies

Status
Under Consideration

20
Points

Lisa Jones
March 18, 2019

Soon, coffee isn't going to taste like coffee — at least not the dark, ashy roasts we drink today. Big producers want a uniform taste, and a dark roast makes that easy: it evens out flavors and masks flaws. But now the best beans are increasingly being set aside and shipped in vacuum-sealed packs (instead of burlap bags). Improvements like these have allowed roasters to make coffee that tastes like Seville oranges or toasted almonds or berries, and that sense of experimentation is trickling down to the mass market: Starbucks, for instance, now has a Blonde Roast. As quality continues to improve, coffee will lighten, and dark roasts may just become a relic of the past.

Note! The comment can be edited or deleted only up to 10 minutes after posting. After 10 minutes, the comment can no longer be modified.

You can also disable the ability to comment on Ideas by clicking on the “Disable comments” checkbox in the Zone Settings (*Lightning Experience - AC Enterprise Ideas App - Ideas Settings tab - Zone Settings subtab*) and saving this change for a certain zone.

Change Idea's Status

When you change the status of the Idea, the moderators and subscribers will receive notification of this event.

You can change Idea's Status using one of the following ways:

1. Use the “Status Auto Update” function (*Lightning Experience - AC Enterprise Ideas App - Ideas Settings tab - Common Settings subtab*). Status Auto-Update

is useful to define some vote threshold to change from “New” to “Under consideration” status to mark that a certain Idea reached vote threshold and was automatically moved to “Under consideration” status. All other status changes should be done manually by the admin team.

2. Change status manually in the Salesforce Classic interface by adding the “Status” field to the Idea Page Layout, because it is not available by default.
3. On the Community, you can edit status both on the Idea list and on the Idea Detail page. Click on the “pencil” button, select a new status from the drop-down list, and Save. This feature is available for the System Administrator license only.

Archiving Ideas

The ideas which are old or declined can be archived. In order to move an idea to the archive, enable the correspondent checkbox on the Idea edit view within the Classic UI. Those ideas will not be displayed in the community ideas list.

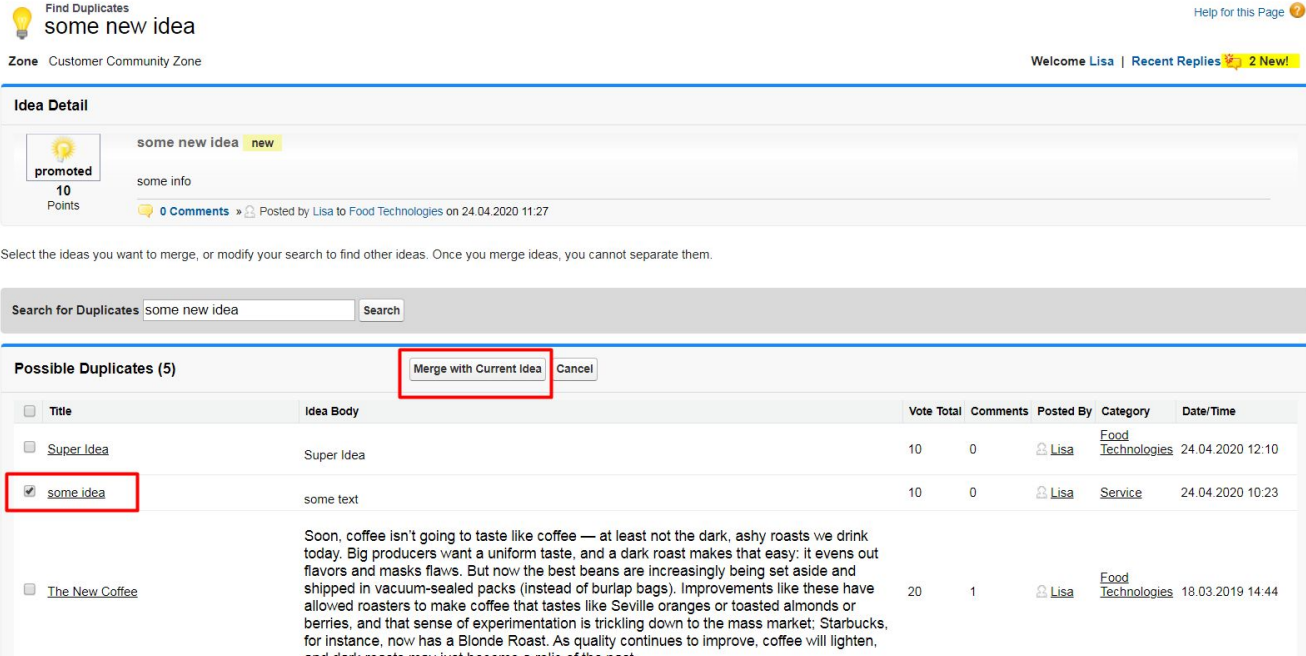

Note: if you don't see the 'Archived' checkbox on the Idea page, then you have to add this field to the Idea page layout in Setup.

Merging Ideas

To merge ideas use Salesforce Classic Interface.

To search for duplicate ideas and merge, do the following:

- 1) On the Ideas tab, click the title of an idea that you want to merge.
- 2) On the idea's detail page, click the Find Duplicates. Salesforce searches all the ideas within the zone and displays the five ideas with titles that most closely match the current idea's title. If the Possible Duplicates list does not contain any ideas that you want to merge, enter keywords in the Search for Duplicates field and click Search.

ADDITIONAL CONFIGURATION

AC Enterprise Ideas is available for configuration in Lightning Experience only!
Choose the AC Enterprise Ideas App from the drop-down list of apps in the App Menu/App Launcher.

Three main tabs cover different areas of Ideas management and configuration: Ideas Settings, Ideas Moderators, Ideas Categories.

Note: Before making any changes, we recommend that you select the appropriate zone for which the settings will be applied.

Ideas Settings

Ideas Settings tab includes three main sections of settings: Common Settings, Zone Settings, Moderation Settings.

1. General Settings

The Ideas Display section is used in case you want some additional custom fields to be displayed when creating an idea. Copy an API name of the created custom field set and paste it to this section.

Subscription. Enable **Idea's auto-subscription on commenting and voting.** By enabling this feature, users will be automatically subscribed to ideas on which they voted or commented.

Statuses Colors. In order for Ideas to be clearly distinguished by its status, you can assign a color to the Status field.

Fill in the fields for statuses with HTML Color Codes (HEX codes).

STATUSES COLORS

Status A	#	<input type="text" value="00FFFF"/>
Status B	#	<input type="text" value="FF00FF"/>
Status C	#	<input type="text" value="FF0000"/>

Note: The setting applies to all zones; you cannot apply different colors with the same status name.

Status Auto-Update section is used to filter out the most popular ideas by status. You can create rules for the automatic update status. When the number of reputation points reaches the specified mark in the rule, the status will be updated to the other value specified in the rule.

To create auto-update status rules, do the following steps:

1. Go to the App launcher – choose AC Experience Ideas – Ideas Settings – Common Settings – Status auto-update item – click "+ New rule" button.

STATUS AUTO-UPDATE

POINTS THRESHOLD	STATUS	NEW STATUS

2. Fill in the fields:
 - 1) In the required field "POINTS THRESHOLD" enter an integer (eg 20)

2) The Status field is not a mandatory value; if the intended Idea has not previously been assigned a status, then the field has to be left without a selected value.

There's an exception if it only applies the rule to the Idea with the previously assigned status.

3) In the drop-down list of the mandatory “New status” field, select the intended status name for the change. Click Save.

STATUS AUTO-UPDATE

	POINTS THRESHOLD	STATUS	NEW STATUS
1	<input type="text" value="20"/>	<input type="text" value="Choose status"/>	<input type="text" value="Status A"/>
+			

You can delete / edit rules. The maximum number of rules created is 5. The created rules, without selecting zones, are applied to all zones without exception.

2. Zone Settings

Zone Settings allow you to configure some component's features or idea's behavior for certain zones individually.

Before editing any options for a specific zone you have to select the zone from the drop-down list for which the settings will be applied.

Features

Login page URL - the URL of the login page in your Community

Disable attachments - disable the ability to attach file and images to ideas

Disable comments - hide all previous comments and disable the ability to add comments for all users

Disable voting - disable the ability to add votes for all users

Disable voting for certain statuses - when the idea reaches the status for which it requires no more votes (e.g. *rejected* and *accepted*), enable “Disable voting for certain statuses” checkbox. Then select the statuses from the available for which you need to block/stop voting

Use custom categories - switch to custom categories instead of standard pick-list ideas categories

Allow displaying archived ideas - makes possible for users to see ideas that were marked as archived

Reputation

You can enable Community member's reputation support for ideas.

A community user's reputation can be configured by setting reputation rewards for three main Ideas actions, which are: “post an idea”, “post a comment” and “make a vote”.

3. Moderation settings

Moderation Subtab shows the list of moderators and the list of forbidden words and expressions in Community Ideas.

Ideas Moderators

You can allocate Idea Moderators for any category(s). The idea moderators would receive a notification for each new idea that is posted in that category.

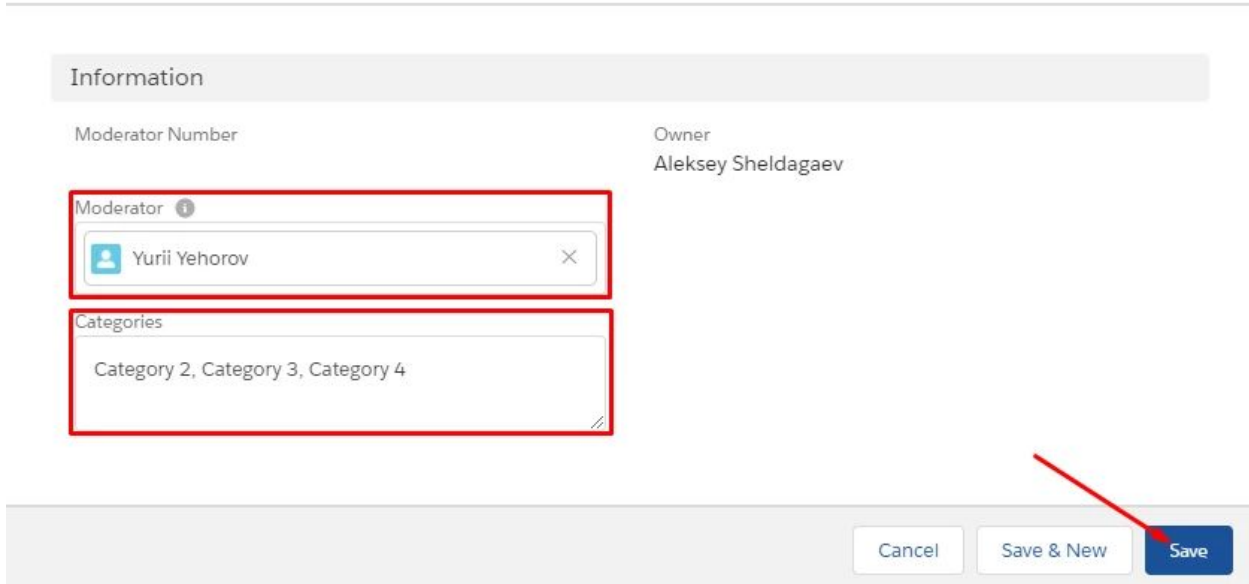

To assign a user as a moderator, you need to do the following. Open the page by clicking on the “Ideas Moderators” tab, click on the “New” button or the “New Ideas Moderator”.

In the New Ideas Moderator window that appears, click on the search field, to assign the proposed users - Moderator, select the appropriate User by clicking on the Name.

In the Categories field, enter the Category or Category name with the “,” or leave the value “All”, which is suggested by default. Click Save.

New Ideas Moderator

Ideas Categories

Custom Categories Settings.

Standard Salesforce configuration does not provide a way to distinguish categories in different Zones or to create a hierarchy. Therefore, we have designed a workaround, so that you can create different categories for each zone using custom settings. It is also possible to add sub-categories. The custom category should be bound to the main one.

NOTE: Make sure you checked the “Enable Categories” checkbox in Ideas Settings (Classic UI – Setup – Ideas Settings – Edit – Enable Categories – Save).

1. Choose “Add Category”.

Add category

CATEGORIES HIERARCHY:

2. In the “Add Category” window fill the next fields:

- enter a Label of a custom category;
- for the “Category” field, select already existing category (Label and Category can be named the same way);

Add category

Ideas Official Answer

Give official answers to posted ideas for community members to know they are listened to and heard.

Sleep Better

Medicine & Health

Status 40 
Points

rose 
February 26, 2019

Researchers at Merck have created a pill called suvorexant that essentially makes you a narcoleptic for a night. It turns out that might be the best cure for insomnia. Unlike existing sleep aids, the drug (which will likely be reviewed by the F.D.A. later this year) works by turning off wakefulness rather than by inducing sleep. "There's good reason to believe this pill brings on more R.E.M. sleep and better rest," says Dr. Emmanuel Mignot of Stanford University. "It'll be less of a hammer on the brain."

To add an official answer, edit the idea, add your answer to the Official Answer field and set up the date answer is added.

Page Variations usage to setup multiple Ideas Zones

This feature allows creating different versions of the page and making these options available to specific audiences and groups. You can use Page Variations to try out different page layouts and styles or create variations that are aimed for a different audience. Each page on the community, including custom pages, should have one default page variation. You can add as many extra variations as you need on the page's Page Variations tab.

In order to customize page variations for audiences, you need to create two audiences and two page-variations for the "Idea List" page:

1. Community Builder – menu pages – choose Idea List – click Page Properties – choose Page variation – click Manage Audiences – New Audience.
2. Create two Audiences called “Community Users” and “Internal Users”:
 - 1) For the “Community Users” audience, select the appropriate profile for external users.
 - 2) For the “Internal Users” audience, select the appropriate profile for internal users.
3. You are able to create two page-variations when at least two Audiences have been created.
4. Create two page-variations called “Idea Community Users” and “Idea Internal Users”:
 - 1) For “Idea Community Users” page variation assign an audience called “Community Users”.
 - 2) For “Idea Internal Users” page variation assign an audience called “Internal Users”.

Custom Field Settings

Note: Custom Field Settings are available in Classic UI.

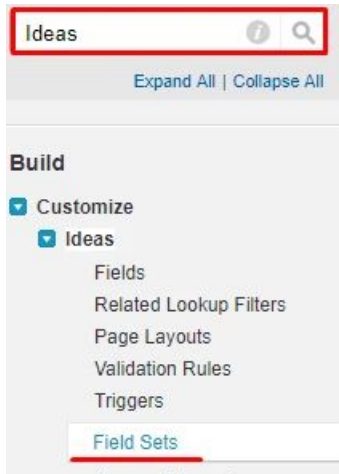

Create Custom Fields and Field Sets to display unique information when creating ideas.

To create a custom field, do the following steps:

1. Go to Setup – Quick find box – type Ideas – choose Fields item – click New.
2. Choose the field type.
3. Enter field Label.
4. Establish field-level security.
5. Add to page layout – click Save.

To create a Field set, do the following steps:

1. Go to Setup – Quick Find / Search – Ideas – Field Sets item – click New.

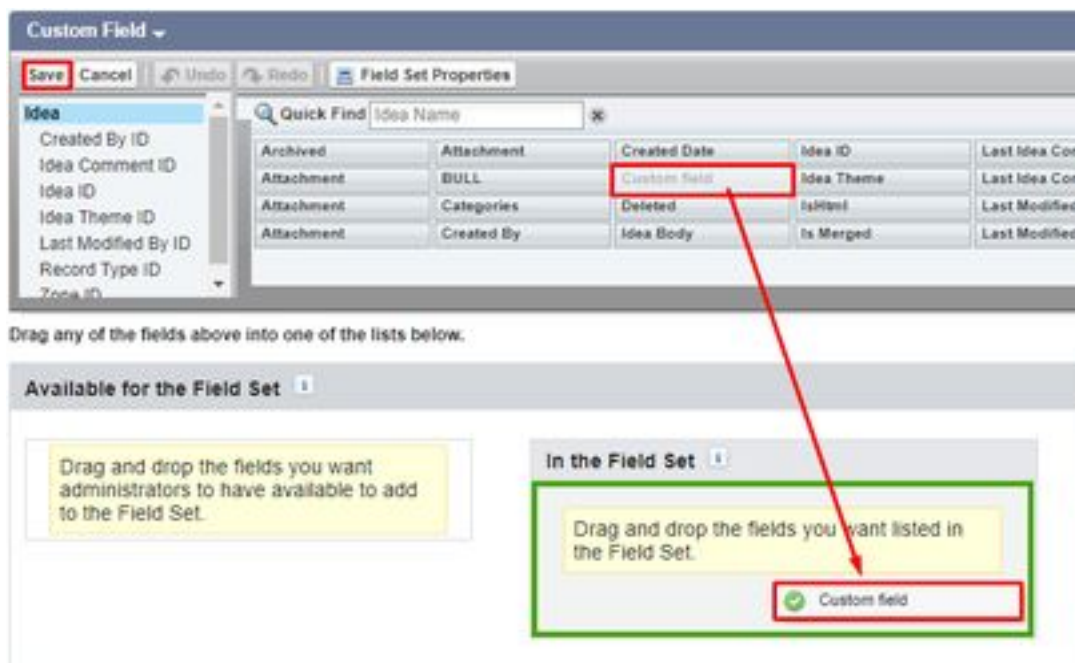

Idea Field Sets

A field set is a grouping of fields. Field sets can be displayed on Visualforce pages and added to

2. Fill in all required fields and click Save.
3. Find the created custom field and drag and drop it to the “In the Field Set” section. Click Save.

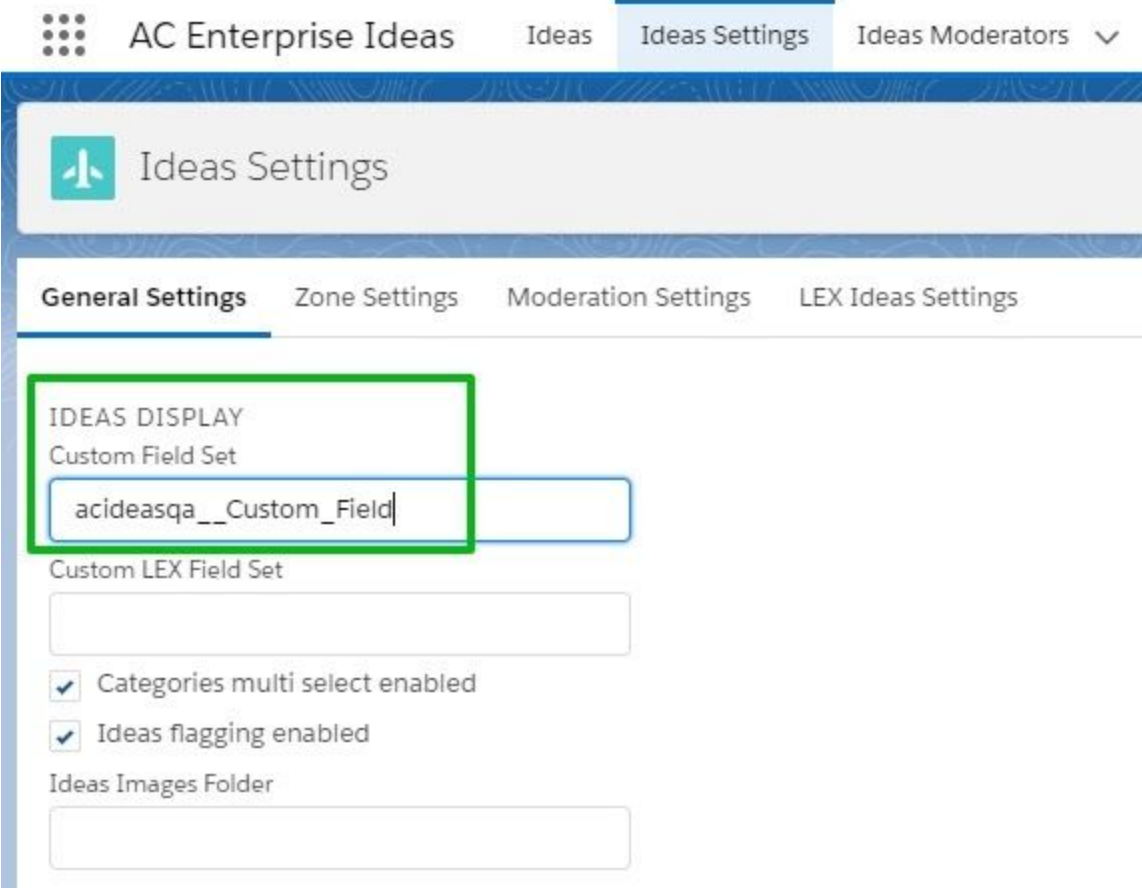

4. In order to display this field set when creating an idea, copy its API name.

NOTIFICATIONS

You can set up sending notifications for subscribers, assign moderators, using categories and statuses of ideas.

Configuration

Email Templates are available within both Classic and Lightning Experience Interfaces:

Setup – Search Find box – Classic Email Templates.

To change an Email Template:

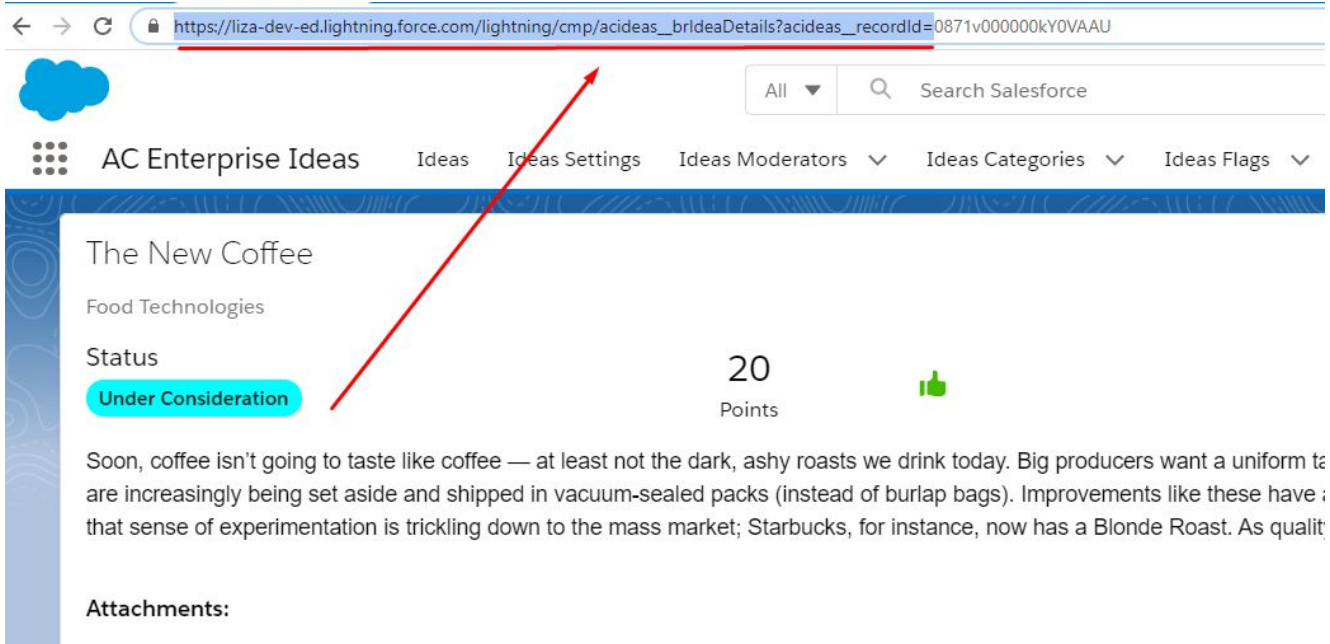

Select a template – click on its Name – click Edit HTML Version button – HTML Body field – click Save.

Replace the example.com/support in each email template with your community URL to provide correct links in the email notifications that lead to your community.

For multiple communities notifications:

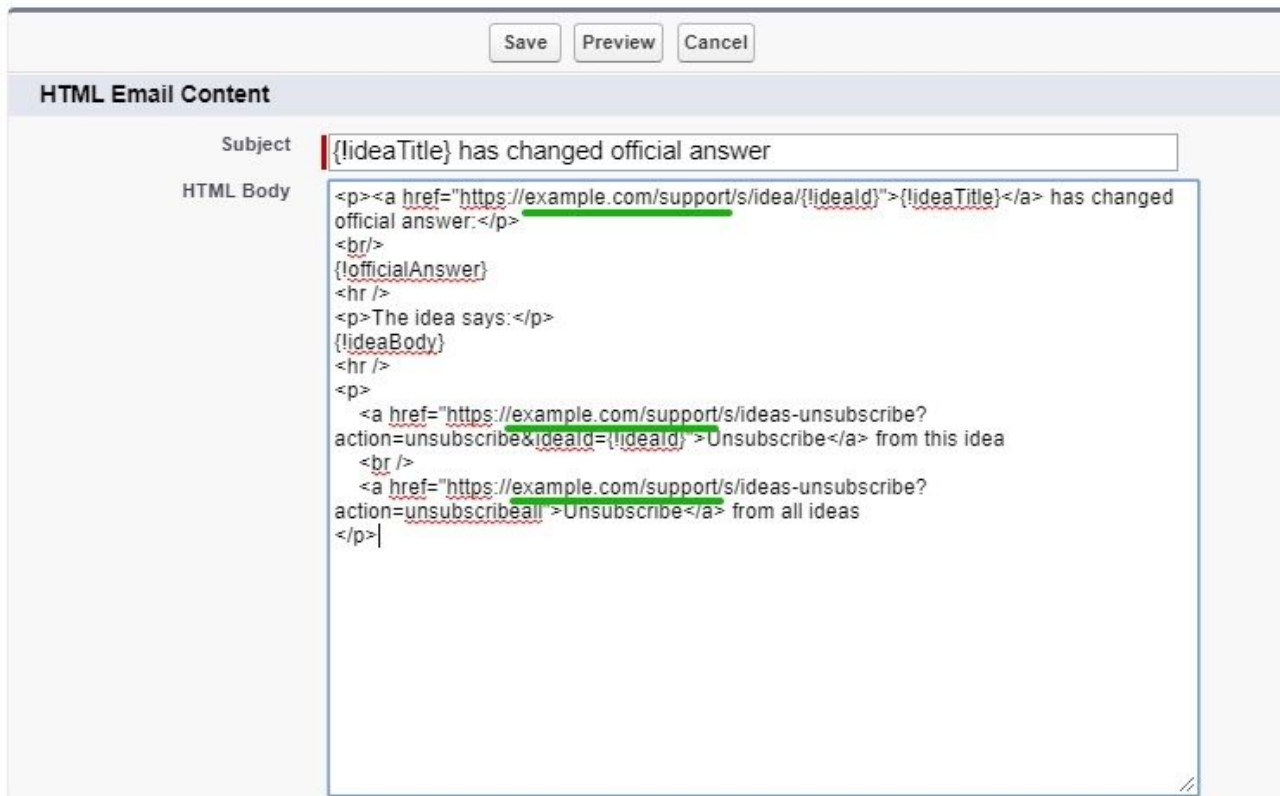

- 1) Enable the “Enable notifications for multiple communities” checkbox in the Ideas Settings - General Settings.
- 2) Configure prebuilt email templates that come with the package to be notified about internal changes performed to ideas by admins/managers.

Open Ideas tab, choose any Ideas record, and copy its address before the number.

The screenshot shows a Salesforce interface for an idea titled "The New Coffee" under the category "Food Technologies". The status is "Under Consideration" (highlighted in a blue pill), and it has 20 points. A red arrow points from the status pill to the URL in the browser's address bar: `https://liza-dev-ed.lightning.force.com/lightning/cmp/acideas__brIdeaDetails?acideas__recordId=0871v000000kY0VAAU`. The page content includes a paragraph about coffee production trends and a section for attachments.

Replace the example.com/support in each email template with ideas record ID URL.

The screenshot shows an email template editor with three buttons at the top: "Save", "Preview", and "Cancel". Below the buttons is a section titled "HTML Email Content".

Subject: `{!IdeaTitle} has changed official answer`

HTML Body:

```
<p><a href="https://example.com/support/s/idea/{!IdeaId}">{!IdeaTitle}</a> has changed
official answer.</p>
<br />
{!OfficialAnswer}
<hr />
<p>The idea says:</p>
{!IdeaBody}
<hr />
<p>
<a href="https://example.com/support/s/ideas-unsubscribe?
action=unsubscribe&IdeaId={!IdeaId}">Unsubscribe</a> from this idea
<br />
<a href="https://example.com/support/s/ideas-unsubscribe?
action=unsubscribeall">Unsubscribe</a> from all ideas
</p>
```

3) Configure email templates to notify community members and managers about changes performed to ideas on the community.

- **Clone** the prebuilt Ideas Enterprise email template

Select a template – click on its Name - click the “Clone” button.

- **Add** the name of the community before the template name

Custom Email Template
New Template

Select the appropriate folder and enter the name and description for the email template below. Note that the Description field is for internal use only.

Once you have completed the HTML email template check the "Available For Use" box to make this template available to your users.

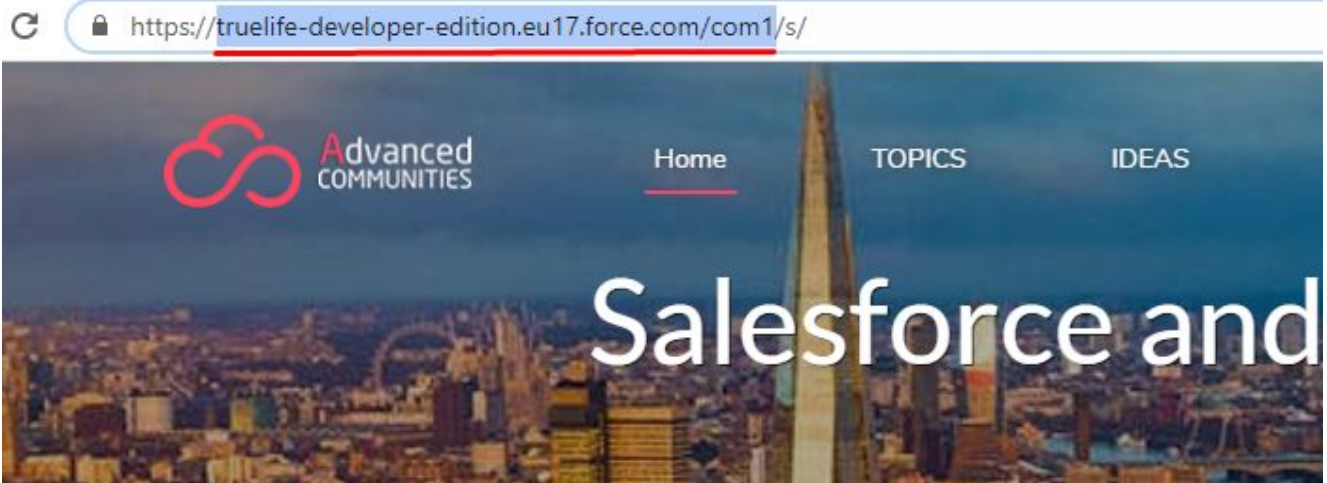

Email Template Edit Save Save & New Cancel

Email Template Information

Template Unique Name	Customer_Service_1IdeaSt
Namespace Prefix	acideas
Installed Package	AC Enterprise Ideas
Encoding	Unicode (UTF-8)
Description	Notification about status field change to moderators

Save Save & New Cancel

- **Replace** the example.com/support in each email template with your community URL to provide correct links in the email notifications that lead to your community.

When you change the Email Template, you have to definitely use the variables closed in curly braces “{}”.

Important!

If you have a version installed before Winter 19, we strongly recommend updating the “IdeaOfficialAnswerChangeToSubscriber” template manually, as email templates can NOT be updated automatically!

```
<p><a href="https://example.com/support/s/idea/{!ideaId}">{!ideaTitle}</a> has changed
official answer:</p>
<br />
{!officialAnswer}
<hr />
<p>The idea says:</p>
{!ideaBody}
<hr />
<p>
<a href="https://example.com/support/s/ideas-unsubscribe?action=unsubscribe&ideaId={!ideaId}">Unsubscribe</a> from this idea
<br />
<a href="https://example.com/support/s/ideas-unsubscribe?action=unsubscribeall">Unsubscribe</a> from all ideas
</p>
```

Set a common sender for emails:

You need to setup Organization-Wide email in Setup → Organization-Wide Email Addresses and then put the created email address in the Organization-Wide Email Address field in Ideas Settings → Common Settings → Notifications.

If Organization-Wide Email Address is empty then the system will use a comment author as a sender.

Moderators Notifications

You can assign internal users to the Idea Moderator role with the ability to split responsibilities by Ideas Categories if necessary (See section [Ideas Moderators](#)).

Moderators get email notifications when:

- the new idea is created (the creator does not receive a notification);
- the new comment is added (the commentator does not receive a notification);
- there is a status update.

Subscribers Notifications

Users who are subscribed to an Idea can get email notifications only if they are enabled (See section [Ideas Settings](#)).

Subscribers get email notifications when:

- the new comment is added (the moderator does not receive a notification);
- there is a status update (the moderator does not receive a notification).

TRANSLATIONS

All component's labels have corresponding instances in Custom Labels. Use them to add translations for different languages.

RUNNING APEX TESTS

Requirements:

- Create test Idea Zone with name “**TestPublic**”
- Set a role for the user which was used to run tests

***Note:** Some custom validation rules on Idea, Account, Contact, User may cause problems with running Apex Tests.*
