

Installation and Configuration

Installation and Configuration of Media Files Player

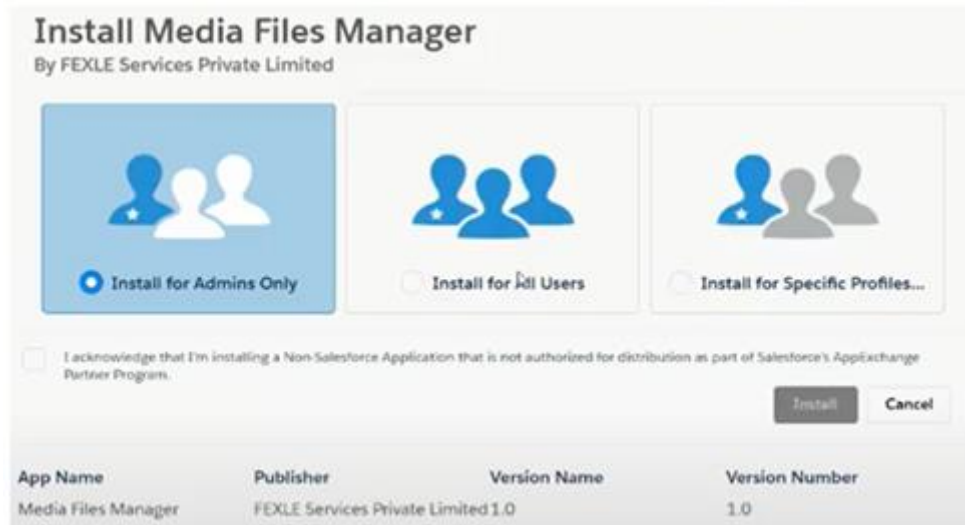

1. Steps to install Media Files Player

Perform following steps to install Media Files Player managed package into your Salesforce org:

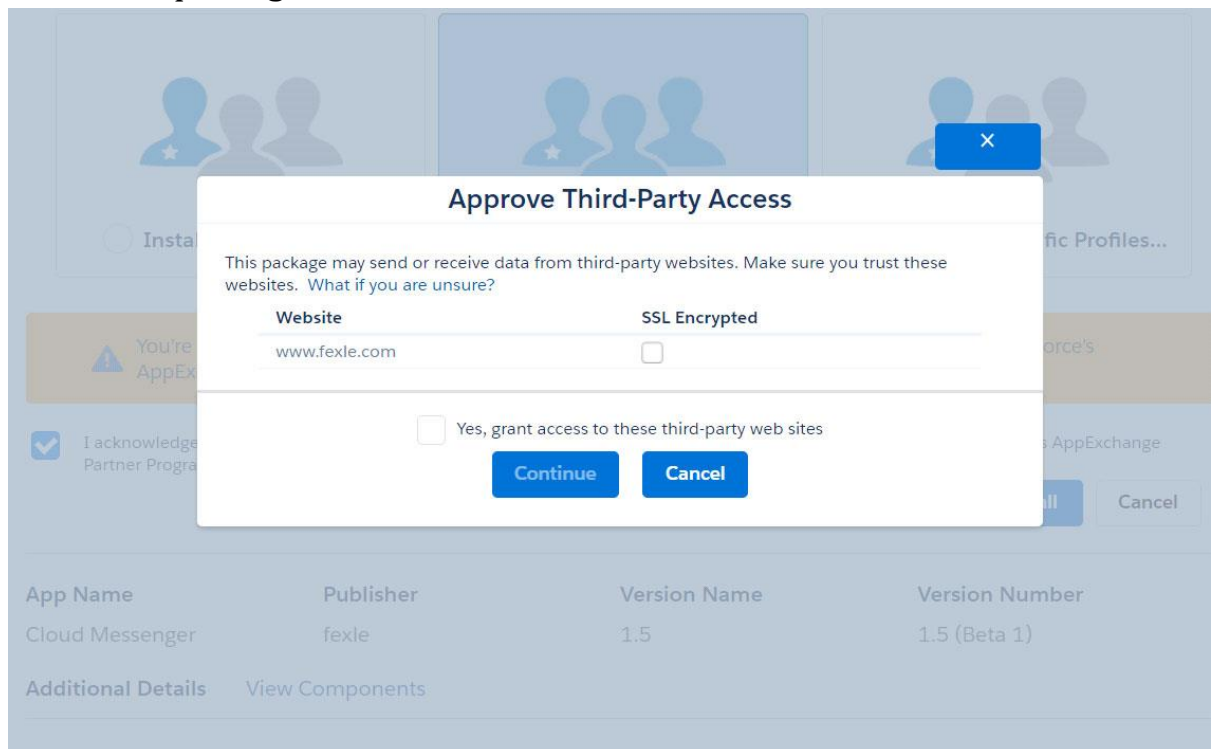

- Login to AppExchange through this link.
<https://appexchange.salesforce.com/>
- In the search bar click on search for “Media Files Player”
- Click on the “Get It Now” button.
- Select to install in either your Salesforce Production or Sandbox Org.
- Click on Terms and Conditions checkbox. Press “Confirm and Install” button.
- Login into your Salesforce Org where you want to install Media Files Player.
- A window will appear like the one below. Select the permission for who can access the Media Files Player application.
 - Select the middle option – Install for all Users - If you are a first time user.

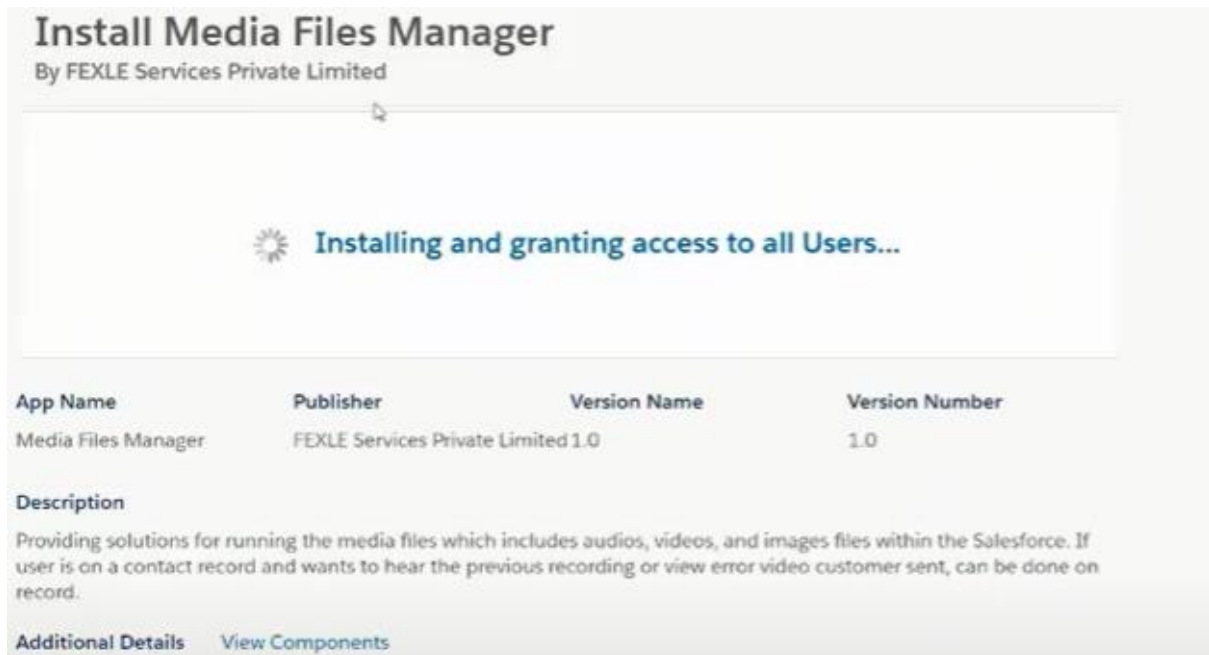

- Click on the checkbox.

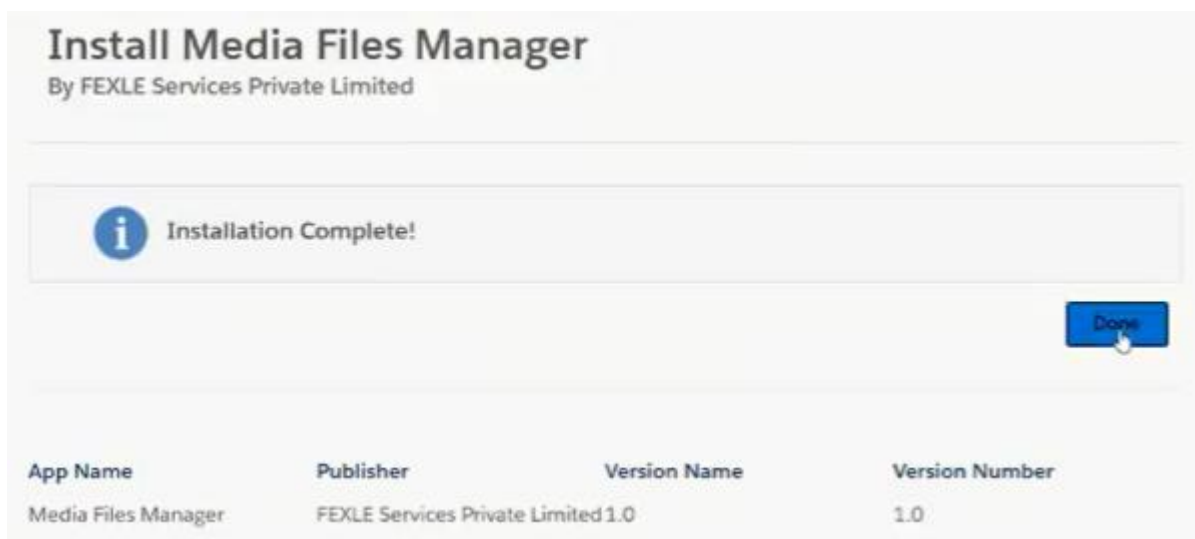

- Click on the “Install” button to begin with the installation process
- A popup screen will display (refer image below) asking for the approval of the Third Party Access.
- Select the checkbox and click on the ‘Continue’ button to install the package.

- A package installation process will be started and the following screen will be displayed.

NOTE - The application may take some time to install. Once Installation gets completed, click on the DONE button. You will be redirected to your Salesforce org dashboard.

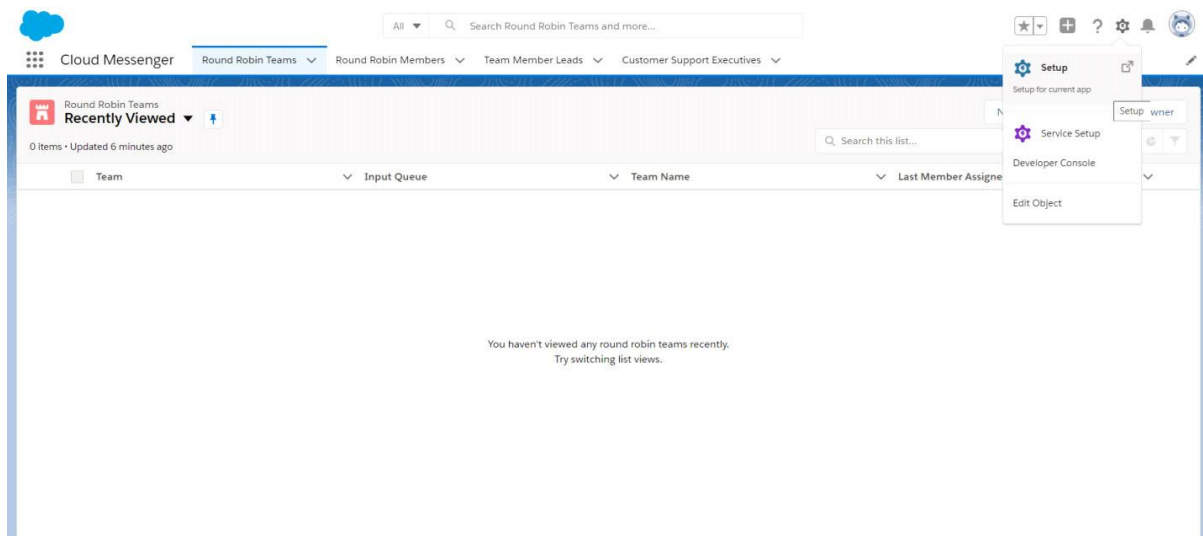

2. Domain Registration

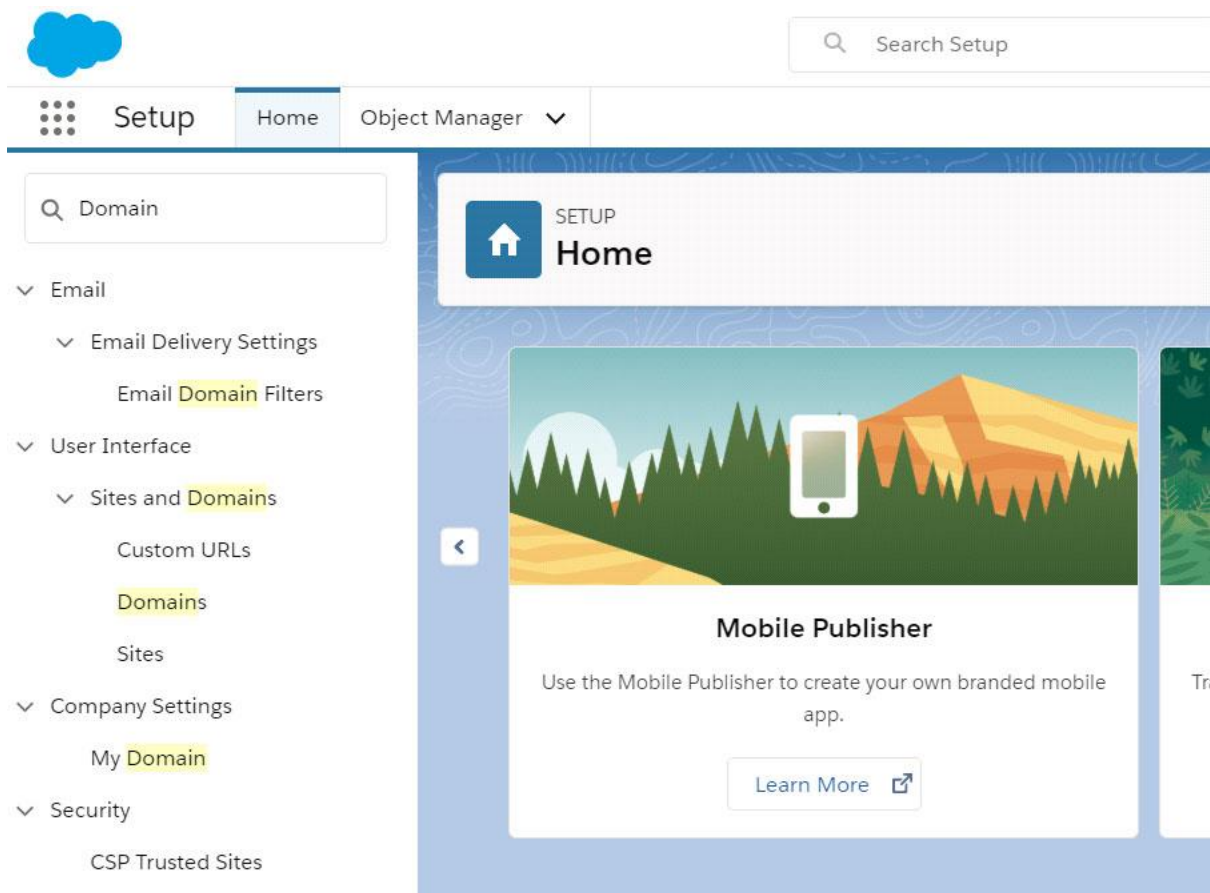

This step is essential for all those users who have not registered their domain yet. It's a one-time process.

Step 1

Click on the setting button on the upper left corner.

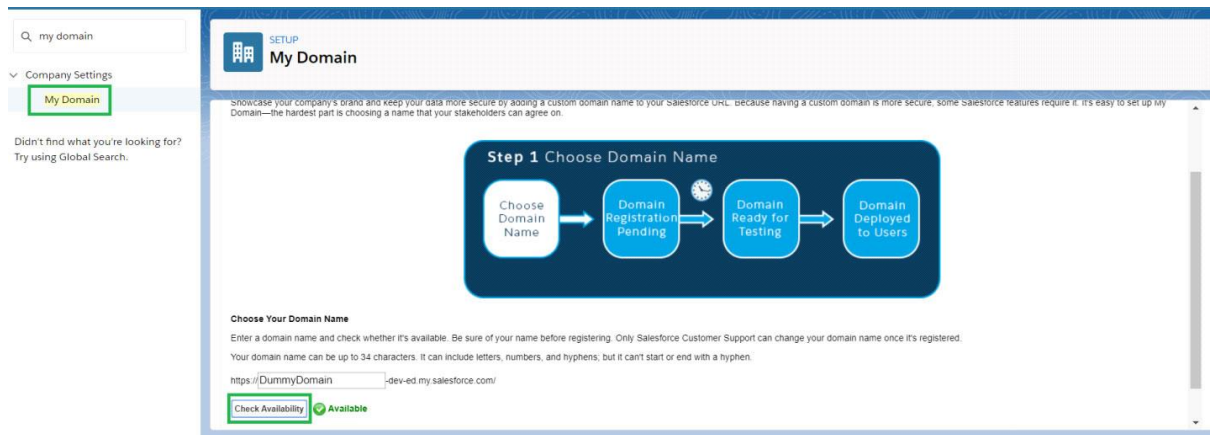

- In left side, you will find Search Box.
- Type Domain, A list will appear
- Click on My Domain

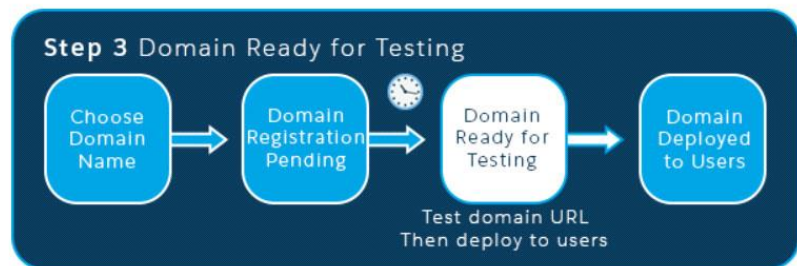

Step 2

- Enter the domain name and check the availability

- Click on register domain
- It will take some time –may be 10 to 15 minutes - to register your domain.

Domain—the hardest part is choosing a name that your stakeholders can agree on.

Your domain name is **abhishek-mathur-dev-ed.my.salesforce.com**

Your domain name is ready. Log in to test it out. [Log in](#)

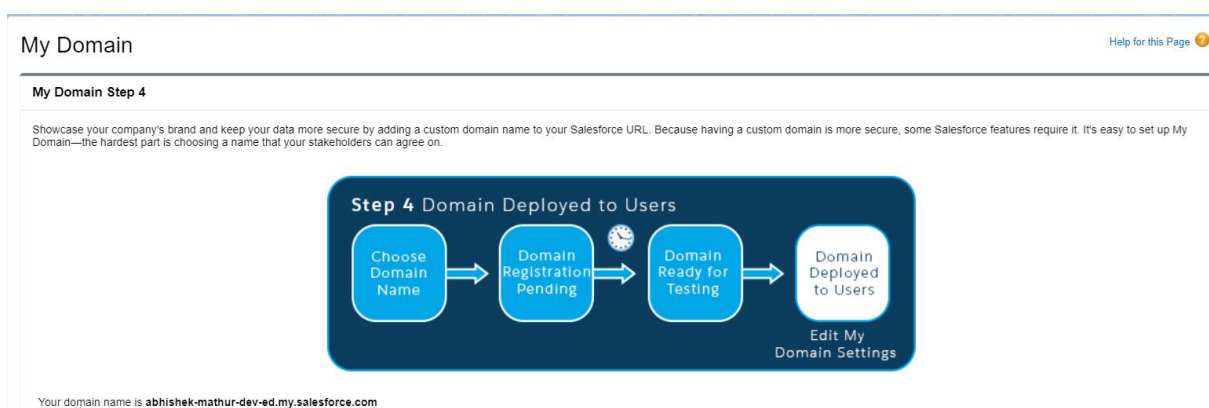

To test your new domain, click tabs and links. If you've customized the UI, check for hard links to your original URL.

[Deploy to Users](#) Roll out the new domain to your org. [?](#)

Authentication Configuration

[Edit](#)

- Click on Deploy to Users Button. And your domain name will started appearing as shown in the image below.

NOTE - Skip Domain Registration, if the domain is already registered.
