BizTBaa is pleased to announce the launch of the next flagship app - OneDoc. OneDoc automates documents, reports and presentations, using the office tool that you are most familiar with, be it Microsoft or Open office.

Create professional documents precisely the way you want, blending all your business needs right in the template using OneDoc's intuitive tagging words. OneDoc has what you need, seamlessly complementing OneCPQ for your document generation needs within Salesforce. There is no change in the document generation process for the existing customers who are using OneCPQ in Salesforce.

Do you see a need to generate documents from your legacy or other cloud-based applications? Use OneDoc's SaaS model as a complete document automation solution for your other application needs.

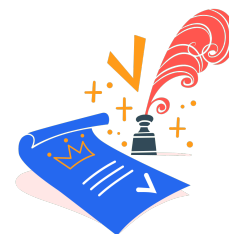

Policy Compliant

Document generation aligns with existing compliance procedures. Create templates that meet corporate requirements and store locally in your environment.

Quick Templating

Jump right into template creation with your current Office suite skills using Word, PowerPoint & Excel*. Easily determine what to include or exclude based on user-defined business logic and variables using OneDoc smart tagging and leave the rest to us. We take care of assembling the required data and final documents, automatically generated from your datasources. When you are ready to generate, choose the original format or PDF.

Multiple Templates

OneDoc supports merging of multiple templates of the same or different formats to generate one PDF output document. It also supports generating multiple output formats, with option to compress and zip into one file for easy digital sending.

Version Control

OneDoc version control allows for reverting a template to a previous revision, which is critical for editors to track each other's edits,

Any Datasource

OneDoc supports any datasource - Salesforce, Oracle*, MS Dynamics*, NetSuite*, MySQL*, Postgres*, SQL*, SQL Server*, etc. Not in this list, OneDoc allows its users to design and layout their documents, statements, invoices, and reports in their respective Office applications, easily populating data from their JSON source. Any Datasource

Unlimited Datasource

Use unlimited datasource as an input to OneDoc to produce multiple or single output document.

Dynamic Tables

Creating dynamic tables with conditional logic in OneDoc is simple and easy. Users can easily design and layout product list and records as tables with conditional logic in documents, statements and invoices.

Dynamic Images

OneDoc supports printing of product images or images related to content dynamically during document generation. Use your existing office skill to design a template and simply tag the fields to be updated to insert dynamic data such as product images, product details, pricing information, and more, using OneDoc tagging.

Supports Formulas

OneDoc supports mathematical, string, number, date functions and any other calculations you can think of. You can dynamically calculate the values, print international date and currency and much more.

One Click

With just one click users will be able to generate a single or multiple documents using OneDoc.

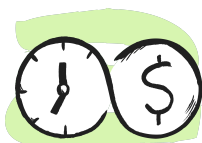

Easy Tweaking

You can customize your document content and format just in time to automatically create documents suited to any customer from just one template.

Within an Hour!

Be automated faster than any alternative! Design your template within minutes, and be up and running in under an hour.

Cost Savings

Reduce development resources and time with OneDoc document automation; streamline your template creation and document automation process, resulting in significant time and cost savings. Stop waiting to invest in your next big idea!
