Vaccine Management Solution

Manage vaccine distribution and inventory at scale and accelerate vaccine administration for your communities

The **Sense Corp Vaccine Management Solution** leverages native capabilities of the Salesforce platform to provide a flexible and scalable solution that can be deployed quickly and enable vaccine providers and administrators to meet the unique challenges associated with the management and distribution of vaccines for COVID-19 and other potential health threats. Our solution is designed to cost-effectively address all guidelines from the U.S. Centers for Disease Control and Prevention (CDC) through a modular approach that can be easily tailored to efficiently meet the needs of any state or local public health organization regardless of size.

WHY OUR SOLUTION?

The solution combines over two decades of Sense Corp healthcare and application development expertise with innovative features to provide a comprehensive solution that meets you wherever you are in your vaccine management journey and accelerate your capabilities and readiness to support your constituents' needs.

Modular Components

The solution's components can seamlessly integrate with a wide range of existing system capabilities, including those designed for electronic medical and health records, state and federal immunization registries, and advanced reporting and analytics packages.
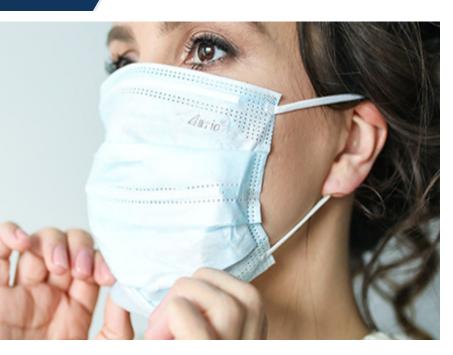

One Centralized Platform

By operating on a singular Salesforce platform, our solution allows you to manage distribution at scale and expedite vaccine administration by integrating functionality for provider vaccine management, public health monitoring, decision-support analytics, and community engagement.

Frontline Visibility

Designed from decades of deep healthcare experience, our end-to-end solution ensures frontline visibility to provide a 360-degree view of the patient's vaccine administration journey from registration through follow-up.

Designed to Scale

The solution's future-proof design allows for additional configurations, adaptations, and integrations to work with any public or private entity ecosystem in providing more comprehensive disease management capabilities for health issues beyond the current pandemic.

The customizable, fully integrated solution provides seamless access through which providers and public administrators can communicate critical information quickly and securely to fast-track their vaccination programs safely to the public.

Our Solution

The solution is HIPAA compliant and GovCloud compatible.

The solution's HL7-compliant data platform enables prediction of inventory shortages, identification of high-need jurisdictions through interactive maps, and various immunization analytics.

The solution features an integrated data hub that allows public health agencies to accelerate capabilities for provider enrollment, supply allocation and prioritization, immunization registration, and other critical areas.

The solution provides a comprehensive view of a patient's vaccination journey.

Inventory Management
Supports vaccination supply ordering, inventory management, and demand forecasting, and leverages dynamic forms to track all CDC-required data

Administration and Record Management
Provides a fully integrated, 360-degree view of the patient's journey, from registration and vaccine administration to symptom follow-ups, and provides all relevant inventory and dosage details, allowing providers to automatically record, track, and submit CDC-required data

Patient Registration and Scheduling
Allows residents to self-register as patients, select a location based on available inventory, and schedule appointments, while also enabling providers to determine eligibility and perform health assessments

Communication and Notifications
Provides customizable views based on user roles and permissions to share up-to-date information through blog posts, submit patient feedback, facilitate health surveys, and send notifications of upcoming appointments via text and email

Analytics and Monitoring
Provides standardized reporting and applies advanced analytics for equitable vaccine supply allocation and distribution, accurate dosage administration, and effective monitoring of population engagement

Integrations
Leverages Sense Corp integration expertise to securely and seamlessly transmit data to state immunization registries and the CDC's Immunization (IZ) Gateway Connect

WHY SENSE CORP?
Founded in 1996, Sense Corp has been delivering exceptional results to hundreds of the world's largest global organizations and complex government agencies. Our deep public sector experience across state, regional, and local jurisdictions is complemented by our expert understanding of the healthcare space from all perspectives, whether payer, provider, or regulatory agency.

We Are on Your Side
We bring an unwavering commitment to our clients' success, as we define customer satisfaction as the prime measure of our success.

We Are Consistent, Reliable, and Predictable
Our staff is comprised solely of "A Team" resources and leverage a methodology specifically designed for Salesforce solutions.

We Are Collaborative
We take a "teach-a-person-to-fish" approach to all projects by educating and sharing knowledge throughout the process.

We Make It Easy
We minimize contract redlines and streamline negotiations to focus on long-term partnerships with our clients.
