

ENCRYPTED EMAIL

No Portals. No Plug-ins. No Extra Steps. Just Secure Email.

Paubox is not only the easiest way to send and receive HIPAA compliant email., but also the only HITRUST CSF certified solution.

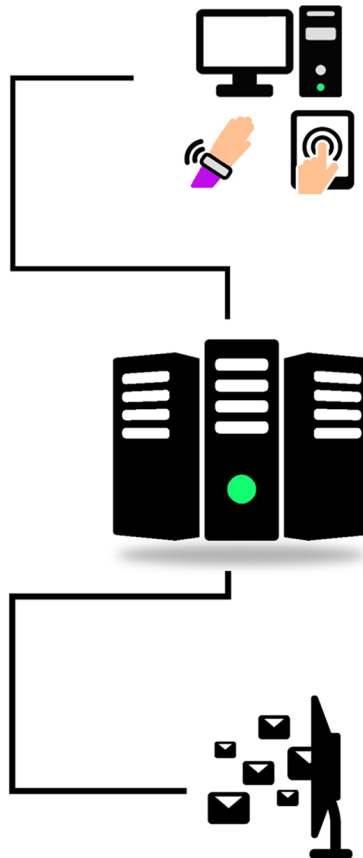

No other solution makes secure email so simple to use. Users can just write and send emails as normal and Paubox seamlessly encrypts the message from end-to-end. It's just as easy for recipients to view the secure email. No keys to exchange., no passwords to remember., or portals to login to.

This is done through Paubox's patent-pending process that includes encrypting all outbound email through our servers with industry-standard Transport Layer Security [TLS] and up to 256-bit AES encryption.

Paubox Encrypted Email can be deployed using existing domains and business email platforms like G Suite., Office 365 and Exchange.

HOW IT WORKS

1. Paubox Encrypted Email users can write and send emails as normal from their desktop or mobile devices.
2. Emails are seamlessly encrypted by Paubox servers with 128/256-bit AES encryption.
3. Emails are protected in transit straight to the recipient's inbox for secure end-to-end encryption.
4. If the destination inbox cannot receive encrypted email, then a link is delivered to view the message and any attachments in Paubox's secure webapp. Replies are also encrypted.

Encrypted Email Data Sheet

THE IMPORTANCE OF EASY

- Greater adoption by users, which means greater security.
