

Fast, secure, and user-friendly data request management

Transcend delivers a full-stack solution to receive, manage and automatically fulfill data requests from your customers.

Why Transcend?

Automated, really.

Automatically fulfill access and erasure requests and consent changes in as little as 30 seconds across vendor and homegrown systems.

Secure By Design

End-to-end encryption, safe and deterministic queries, and more. Engineered so we never see your user data.

Headaches? Eliminated.

Reduce and de-risk internal processes through auditable automation. Conserve internal engineering resources, and impress your users, too.

Trusted by leading brands to meet regulatory obligations and exceed user expectations.

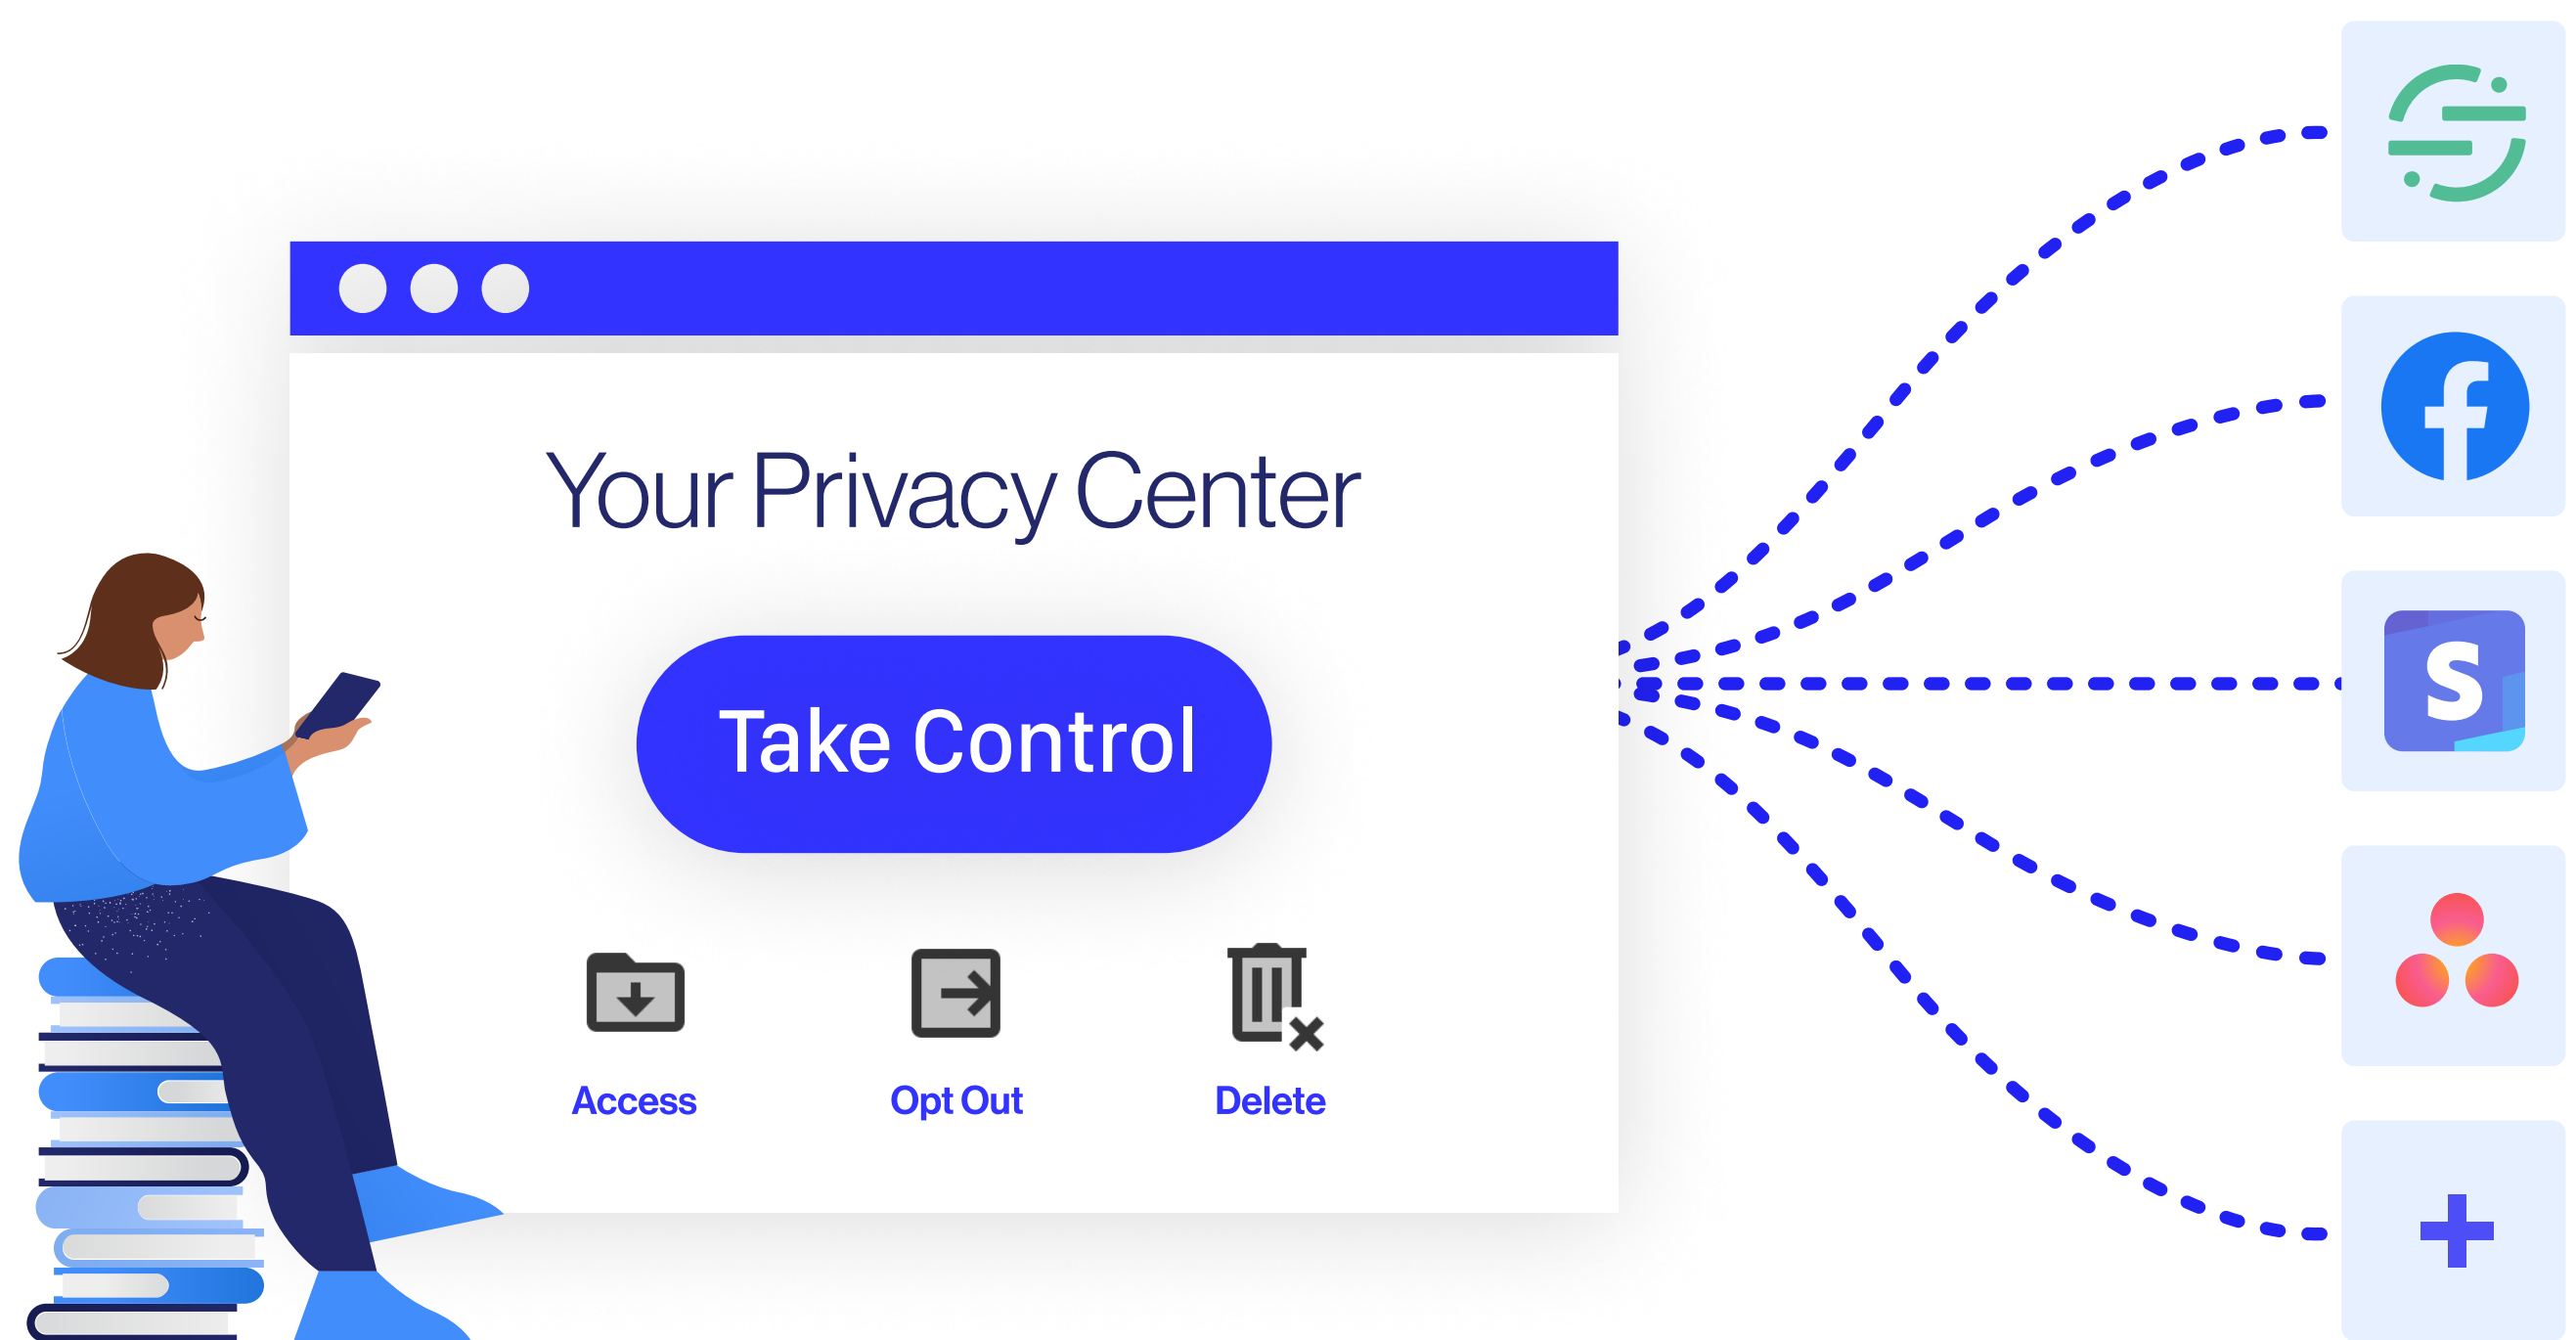

“ We fundamentally shifted our approach to data privacy in April 2019 to be more user-centric, and worked with Transcend to include more transparency on our data practices and offering immediate data access to our millions of users. When we took this approach, we were flooded with hundreds of thank you tickets. ”

How it works: driving better privacy outcomes for everyone

»» Through a Transcend-powered Privacy Center, companies can offer users complete control over their data...

»» ...through infrastructure that automatically and securely returns user data regardless of where it's stored.

For engineering teams

Free up resources with infrastructure built to grow with you. Transcend integrates with your entire stack, including custom workflow logic via API.

For legal teams

Meet (and exceed) regulatory obligations through auditable process automation, including secure authentication and a living data map.

For your end users

Build brand trust and empower your users with respectful data and consent transparency and control.

“ We didn't want to sign up with any old privacy vendor. We needed to partner with someone who could give our users a modern and secure data privacy experience. We also don't need a marginally better workflow. We wanted a real technology solution that gives our users access to their data rights in seconds. ”
