

Apex Access

To ensure that the order grid works for community users, you can either install the package for all users (there are checks to ensure users that don't have access to orders, products, and order products can't see the grid so there won't be any security implications) or you can install the package for specific profiles. If you install it for specific profiles and want to give access to another profile later, give access to the following apex classes in the profile settings for the applicable profile.

- CartSummaryWrapper
- CartProductWrapper
- OrderGridController
- OrderGridControllerTest
- OrderGridControllerTestUtility
- OrderGridWrapper
- OrderProductWrapper
- OrderWrapper
