

Get your Salesforce CPQ ready for SOX in just one day!

As recommended in Salesforce's *Best Practices Around IT Compliance for SOX* solution guide

// **Strongpoint is a compliance dream.** //

AppExchange review

Ideal for: Heads of IT, Business Systems or Sales Ops

Your CPQ is highly customized, and highly complex. It's mission-critical for your sales teams. And now, it's coming into scope for audit.

You need a way to prove to auditors that revenue and financial data is tightly protected. And you need to do it quickly, with minimal disruption to your team.

You need Strongpoint.

Stay Productive and Stop Stressing Over Audits

Not all of Salesforce is in scope for audit. Strongpoint works by focusing on what's critical, and automating the hardest parts of protecting it.

In just a few hours, you can set up an automatic system that continuously audits changes to rules and related customizations — and makes it easier than ever to meet the needs of your auditors.

How It Works

STEP 1

Identify what's in scope and establish specific policies for protecting it.

STEP 2

Strongpoint automatically monitors and protects critical CPQ and Billing rules, and related configuration data.

STEP 3

Strongpoint automatically alerts you to unapproved changes, and reconciles approved changes with tickets in Strongpoint, JIRA or ServiceNow.

The Result

- ✓ You're ready for audit at any time
- ✓ You've saved up to 90% of the cost of compliance
- ✓ You've reduced audit fees up to 75%
- ✓ You've freed up resources that would've been spent on audit prep
