

Cut CPQ Migration Time by 66% with AppOps

How can a new SKU, promotion, or price changes drive revenue if it's stuck in development? Built for Sales Ops, Product Managers, and Salesforce Admins, Prodly AppOps completely automates CPQ data migration so anyone on your team can move CPQ configurations between Salesforce orgs in no time.

CPQ Tools for Everyone on the Revenue Team

Sales Ops & Product Managers

Pre-built CPQ deployments templates and easy-to-use, intuitive UI to deploy that new discount schedule in a few clicks.

CPQ Admins

30+ advanced data processing features to move an exact copy of your CPQ configuration from org to org.

CPQ Developers

Run CPQ deployments and commits from the comfort of the command line with our DX plugin and VCS integrations.

It shouldn't take a data science degree to release CPQ changes to your sales team.

Roll Out Pricing Changes in Minutes, Not Days

Get product bundles, price rules, and promotions into the hands of sales reps, as quickly as you build them. Never deal with waiting for changes to get unstuck from a sandbox again.

Improve Quote Accuracy

Test CPQ configuration changes against real production scenarios and eliminate quoting errors before they reach your sales reps—or worse your customers.

Maintain SOX Compliance

AppOps automatically provides a full audit history of every change to your CPQ configuration.

Spot Bad Quotes Immediately

Always-on monitoring tells you any time a change to Salesforce or CPQ has affected your quote logic.

Eliminate Data Security Issues

Never export Salesforce data to unsecure CSVs or deal with error-prone VLookups again. Automatically obfuscate sensitive data.

Use Developer Sandboxes Like Full Copy

Work faster and smarter by giving everyone their own copy of production. Seed your entire CPQ schema to up to 5 lower-level environments simultaneously.
