

Usage :

1. Create an Aura Component and add it on your component using below code:

```
<APTL:MultiSelectPillComponent objectAPIName="Contact" IconName="standard:c  
ontact"  
selectedRecordList="{!v.selectedList}" label  
="Contacts" />
```

Javascript Controller Code :

```
saveRecords : function(component, event, helper) {  
    console.log(selected recordList--  
' + JSON.stringify(component.get("v.selectedList")));  
    //call the apex code to save the selected records  
}
```

//SelectedList variable will have all the ids of the records selected in the controller.

2. Save the field values in the your controller from backend to any record.
