The public sector's data security requirements make finding the right cloud-based solutions challenging. Risk-averse IT teams must select vendors who understand their needs and protect their data above all else.

S-Docs

Native Document Generation & E-Signature for Salesforce

S-Docs is the only 100% native document generation and e-signature solution available for Salesforce Government Cloud customers. Architected and hosted entirely on Salesforce servers, S-Docs processes all data inside of Salesforce and has no external dependencies.

S-Docs also aligns with FedRAMP Moderate Level requirements and the Department of Defense Cloud Computing Security Requirements Guide (CC SRG) at Impact Level 2 and 4 (IL-2 and IL-4).

Evaluating & Implementing S-Docs

As a partner to government organizations around the globe, S-Docs understands the cloud solution evaluation process. We're here to help complete your security vetting process and achieve your ATO quicker.

STEP 1 — Evaluate Security

If you have already evaluated and approved Salesforce Government Cloud, passing your security review or achieving ATO for S-Docs will be expedited significantly.

S-Docs's infrastructure is maintained by Salesforce, meaning that Salesforce inherits the bulk of the security controls surrounding application architecture. S-Docs doesn't have access to the data that it processes nor does it send data outside of Salesforce. S-Docs has also been evaluated and approved for alignment with FedRAMP Moderate Level requirements and Department of Defense Cloud Computing Security Requirements Guidelines at Impact Level 2 and 4 (IL-2 and IL-4). Our attestation letter is available upon request.

S-Docs allows you to pass your security review and achieve your ATO much faster than with traditional cloud solutions, and we're here to help every step of the way.

STEP 2 — Assess Functionality

Experience our solution for yourself with a trial of **S-Docs Unlimited Edition**. Our world-class support team is here to help you along the way.

The S-Docs Professional Services team is ready for customers looking for custom proofs-of-concept or pilot projects. Give us your requirements, and we'll show you what S-Docs can do to exceed them.

STEP 3 — Procure Licenses

S-Docs partners with government IT solution providers like Carahsoft to help our customers evaluate our products and procure licenses. We'll recommend an implementation partner or work with one you're already partnered with. NASPO contract pricing is available for all state-level clients. And since we're a native app, our solution is built to blend seamlessly with Salesforce Government Cloud, so you'll get up and running quicker.

S-Docs: Trusted by Government

Transform your digital document processes faster and more securely with S-Docs, a solution made for the public sector. S-Docs is trusted by hundreds of government organizations globally for its secure native architecture, faster processing, and ease of use
