

Release Notes - December 2021

RPA Bots for Salesforce Ver 3.5

This latest release of RPA Bots for Salesforce (v3.5) has been updated with new translations to allow users to use the applications features in any of the supported locales. The new languages align to the Automation A360 platform and bring the language support to parity with it. Additionally, the ability to start an AARI Process from Salesforce with mapped data from the Lightning Record was also added, giving users the option to work with bots more collaboratively through complex workflows. The new capabilities as well as bug fixes in this version are laid out in their respective sections below:

New and Improved

- Automated processes now available with Automation Anywhere Robotic Interface (AARI) integration

With the AARI integration, common business workflows are now more simple and accurate by users having access to automated processes. For more information, see Process automations in RPA Bots for Salesforce.

- Process configurations administrative workflows to map AARI processes to Salesforce

After you enable AARI integration, you can now use the process configurations feature to select a process from AARI and map and deploy it in Salesforce by using the

Automation Launcher component. Create process configurations in RPA Bots for Salesforce

- Process connection required for process configurations

When you create a connection, you choose either a bot or a process connection type. Each connection type corresponds to the purpose of how the connection is used in Salesforce. To configure a process, you need an authorized connection with the process type.

- Automation Launcher modifications for automated processes

The Automation Launcher Lightning component includes the following updates to support AARI integration:

Settings (gear icon) are available for users to Enable AARI.

Process configurations are discernible by a Start button and a brief status of requests in process. Each process includes a refresh option.

- More languages supported

Now, all the languages supported in the Automation Anywhere Control Room are supported in RPA Bots for Salesforce. The following languages have been added to the RPA Bots for Salesforce package:

- Chinese (Simplified)
 - Chinese (Traditional)
 - French
 - German
 - Italian
 - Japanese
 - Korean
 - Portuguese
 - Spanish
-
