

Generic Delete Package

Usecase : Need a generic method to delete data from any Object.

Built a Batchable generic Apex Module to address the usecase.

Data can be deleted in three different ways.

1. SOQL as input
 - a. For example, Select Id from Account
2. List<string> as input
 - a. List of Record Ids to delete
3. Set<String> as input
 - a. List of Record Ids to delete

Here is the sample call outs.

Approach 1:

```
Gdelete.DeleteBatchClass obj = new GDelete.DeleteBatchClass('Select Id from Account ');
DataBase.executeBatch(obj,50);
```

Approach 2 :

```
List<Account> lstAccount = [Select Id from Account];
set<String> ary = new Set<String>();
for(Account acnt :lstAccount)
    ary.add(String.ValueOf(acnt.Id));

GDelete.DeleteBatchClass obj = new GDelete.DeleteBatchClass(ary);
DataBase.executeBatch(obj,50);
```

Approach 3 :

```
List<Account> lstAccount = [Select Id from Account];
List<String> ary = new List<String>();
for(Account acnt :lstAccount)
    ary.add(String.ValueOf(acnt.Id));

GDelete.DeleteBatchClass obj = new GDelete.DeleteBatchClass(ary);
DataBase.executeBatch(obj,50);
```
