

1. When using filters, you can use multiple conditions using the following example

Parent Filter Statement

(ProfileId = '00e5f000002rNIVAA2' OR Profile

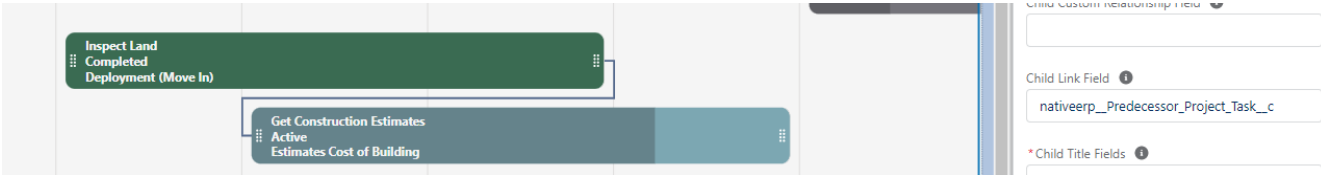

Filter search examples:

- a) (ProfileId = '00e5f000002rNIVAA2' OR ProfileId = '00e5f000002rNIWAA2')AND IsActive = True
 - b) Name LIKE 'Evaluation%'
- (Make sure to replace with your own org ID's and field names)

2. What is the Link field in configuration?

The link field in the configuration is the lookup field within the child object that points to the Previous Child in the path.

For example

In the image above, we can see the project task (a record) connected to the previous task to create an order of execution.

3. Display Related Objects field.

* Child Title Fields

Name,Project__r.Name, Total_Expense_Formu

Child Popup Fields

You can display related object information using __r method.
 "__r" is used for retrieving field values from the object's related another object when those objects have a relationship via the Lookup field.

Example:

- a) Project__r.Name
- b) RelatedRecord.Department (Standard Object lookup)

4. How to use the Color Matrix field:

The Matrix field can set the Child record in different colors according to the field content.
 Typical usage is: Status or Stage can reflect the record value using color.
 For example, below we are using Project Status picklist field:
 In case value is 'Draft' the color value is 'Gray' (you can use either color name or Hex #)
 In case of Planning the cell, color will be Green.
 [{ 'key': 'Draft', 'value': '#74737a' }, { 'key': 'Planning', 'value': 'Green' }, { 'key': 'Active', 'value': '#7CA7B2' }, { 'key': 'Completed', 'value': '#3E8461' }]
 Make sure to validate both values and the exact format for the Color Matrix to work.
 [{ 'key': 'Text', value: 'Color Name or #' }]

You can use <https://tableconvert.com/json-generator> to make sure of proper JSON formatting.
(Make sure to use "key" and "value" as headers)
