

Mental Health Case Management

Coordination of Mental Health Services

MTX's Mental Health Case Management solution assists states and counties with easy, reliable access to programs that support individuals in crisis.

From initial encounters with public safety officers and hospital admissions, MTX's system assists with intake assessment procedures, treatment plans and provider referrals. This patient-centered approach reduces returns to medical and correctional facilities.

FEATURES:

Comprehensive assessment workflow that seamlessly coordinates mental health and suicide prevention services.

Coordinate incoming messages through electronic workflows and task assignments integrating with 988 systems.

Interagency case management for real-time event triage between behavioral health agencies, hospitals, treatment facilities, law enforcement and more.

Real-time data analytics and dashboard increase visibility into treatment facilities' services, agencies' capacity, utilization rates, hospital admissions and more.

Services hub and reporting system establishes a network of community-based resources to address the needs of an identified population that is both PII/PPI and HIPAA compliant.
