

Dappsuite Wallet

Buying, Sending and
Borrowing USDC on
Salesforce

The Solana Wallet for Salesforce

From the makers of the premier blockchain application suite for the Salesforce ecosystem, this Solana Pay Wallet enables Salesforce users to buy, borrow and send USDC Payments using the Solana Blockchain and Jet Protocol.

1. Intro

We developed three easy functions to allow customers to quickly use USDC:

→ **Buying**

An easy on-ramp to buy USDC.

→ **Sending**

Give people any easy way to send USDC to their accounts and contacts.

→ **Borrowing**

Provide a simple way to borrow USDC against SOL

—
How many of the 200,000+
Salesforce customers can
make instant, low-fee, at
anytime payments with the
rest of the world?

None!

But, now they can!

—

The Dappsuite Solana Pay Wallet not only allows users to send USDC... but they can also **BORROW** **USDC** against Bitcoin, Ethereum, and Solana using Jet Protocol.

2. Examples

Salesforce Customers can now earn interest on their crypto assets and borrow USDC to be used for procurement and other vendor payments:

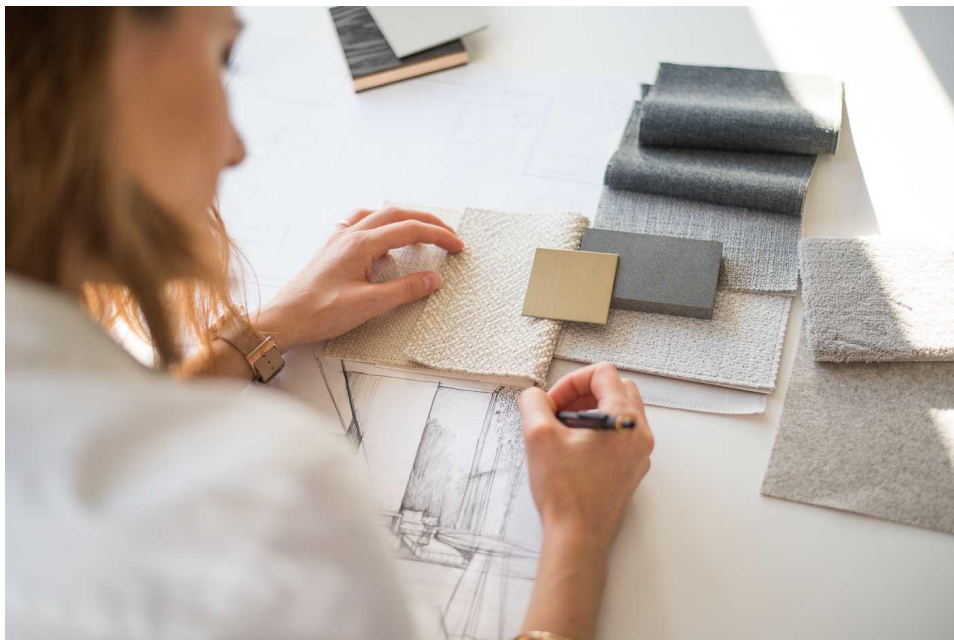

What

International real-time payment using USDC on Solana.

Who

Catherine, an interior designer and Marcos a furniture retailer..

Meet Catherine.

Catherine is an interior designer and is on a tight timeline to deliver a custom sofa to her client.

Her past experiences ordering custom furniture, even at high-end retailers has not been great - the process is opaque and often ends up in unpleasant surprises and missed delivery dates.

Meet Marcos.

He recently opened a boutique furniture shop near the Louvre in Paris.

Visitors also buy from his online store, mostly international, and often request to use many different currencies making anything beyond a simple transaction a challenge.

Story for illustration purposes only

A simple payment

Catherine needs to send a payment to Marcos before the weekend or she will miss the delivery deadline for her client. She doesn't have time to drive to the bank to process the international wire.

If she doesn't get the payment done before 4pm she has to wait another 3-5 days before Marco can even confirm the order for her client.

—

**A transaction barrier
left Catherine
feeling embarrassed
and hurt Marco's
business.**

Then, Marcos discovered Solana Pay on Salesforce

He's able to give her a seamless payment experience and she was able to complete the payment that evening.

The USDC payment is successful, settles instantly and is tracked on Catherine's customer record in Salesforce. Marcos is already preparing the shipping logistics for her couch to go out Monday.

From outsider to star

Catherine ordered 28 more couches over the next 8 months from Marcos. She is now recommending her other vendors accept USDC via Solana Pay and Salesforce.

Marco's commerce business is also thriving with the addition of the USDC payment.

He has started accepting other cryptocurrency as well that he is using as collateral to borrow USDC for his supplier payments.

4. Closing

Milestones

What has been accomplished and what might be left to tackle?

What's next?

What's next for the Dappsuite Solana Pay Wallet?

Milestones & Roadmap

November 2021

Learn about how to build
on Solana in Lisbon,
Portugal at Breakpoint

July 2022

Manage AR / AP using
USDC and Financial
Services Cloud

2022

2022

February 2022

Borrow USDC and Send
USDC Payments to
Salesforce Accounts and
Contacts

November 2022

Update GL and other
end-of-year tax and
financial systems with all
USDC payments

Thank you!

We hope you found this presentation useful in understanding the potential for USDC stablecoin payments on the Salesforce platform using Dappsuite Wallet.

Please feel free to reach-out if you have any comments, questions or feedback.
