

## MTX Multi-Vax Hub

MTX's Multi-Vax Hub scales from COVID-19 systems to administer any and all vaccines. It can validate inventory, predict optimal distribution models and remove the need for time-consuming paperwork. This cloud-based, configurable and dynamic solution can easily replace legacy systems and improve outcomes for patients, health agencies and clinics.

### FEATURES:

Customize reporting needs based on population types, immunization records, health and efficacy outcomes, etc.

Save time for data analysts, clinicians and patients and remove human error from registration, deployment, inventory management and all lifecycle stages

Track multiple batches of individual vaccines from distribution to dosage and follow-ups

User-friendly registration from initial patient contact to appointment scheduling, delivery, boosters and post-care survey

Enable configuration of vaccine allocation criteria based on CDC guidelines

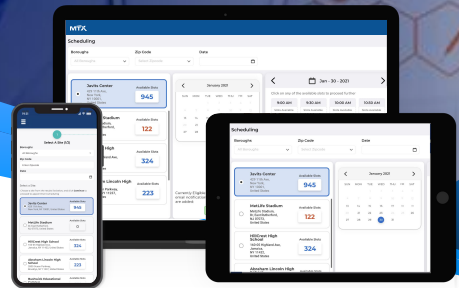

In-line billing option for efficient and timely reimbursements

Ability to create "pop up" clinics and assign staff to those events

### BENEFITS:

In-line vaccine forecasting for clinic staff

Real-time reporting to the federal government

Utilizes mavQ Intelligent Document Processing to streamline insurance and demographic collection

Inventory distribution management

Provider enrollment and vaccine allocation

Patient intake and administrator workflows

Vaccination screening via an online form
