

Case Study: FOREX.com

FOREX.com provides retail traders and institutions with exceptional liquidity, service, and technology to optimize trading.

| Team | Location | Founded |
|--------------------------|------------|---------|
| 600+ full-time employees | London, UK | 1999 |

The Ask

Forex.com (GAIN Capital) needed a trusted, long-term partner with outstanding skills in three areas: web and mobile app development, QA and testing, and Salesforce. A strong track record of trading domain expertise was also required.

The Outcome

To help them achieve their objectives, we:

- Automated smoke tests of the mobile application to run on each new build
- Ran more than 700 automated test cases for the desktop app, saving seven days of manual testing per release
- Initiated API web service smoke collection for increased testing speed and reduced risk of service outages during live releases
- Automated the regression test suite, saving 64 days of manual testing per release

Technologies & Tools

| | | |
|------------|----------------|----------|
| C# | Selenium | NUnit |
| Node | Cucumber | FitNesse |
| JavaScript | Protractor | Appium |
