

Surfly App on Salesforce

Surfly's Salesforce app enables you to start connecting with your customers straight from the Salesforce dashboard.

With the app, you can leverage secure and compliant channels such as co-browsing, screen sharing, video chat, or file sharing to instantly interact online with your customers. Surfly works on any website, so you can interact on your own domains as well as on third-party websites. The best part? We do not require any setup or installations. It's as easy as apple pie – just enter a URL and press "Launch".

Benefits

- **Speed to market:** Collaborate over any domain, instantly!
- **Fully collaborative:** Multiple participants can collaborate with each other using co-browsing, screen sharing, video chat, file sharing, or annotations.
- **Secure and compliant:** Surfly never stores any data, and is compliant with industry leading regulations such as ISO27001, HIPAA, and GDPR. We also enable you to mask certain website fields so that customer data never leaks.

Looking beyond

Surfly can do even more! Surfly's technology is easily integrated into your own platform or product and can be fully white labeled or rebranded. Additionally, there are more options and features available that address the security and compliance aspects of your online interactions. Some of the features we enable are – SSO, element masking, session continuation, block and allowlist, audit logs, and session recording. Please contact us directly if you are interested in learning about these additional functionalities or if you are looking to integrate Surfly in your own platform.
