

Comprehensive SaaS Security with AppOmni and Salesforce Shield

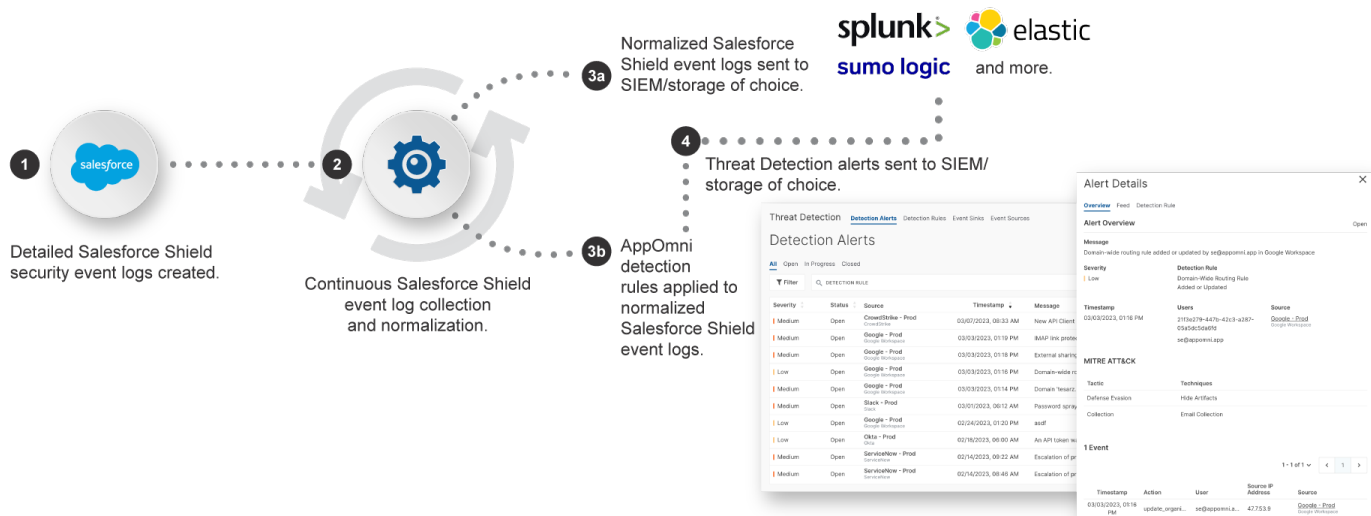

Enterprises trust Salesforce Shield to secure their critical company and customer data stored in Salesforce. When AppOmni is combined with Salesforce Shield, your Security, Compliance, and IT teams will receive a complete set of tooling to effectively manage security posture across all Salesforce environments.

“AppOmni is uniquely positioned to provide businesses with the tools and visibility needed to securely manage the use and data access of SaaS environments. AppOmni helps ensure that clients can consistently maintain best-in-class SaaS security throughout their organizations.”

— Robert Keith, Managing Director, Salesforce Ventures

Organizations can enjoy the benefits of SaaS and better serve customers while knowing their SaaS environments and data are secure.

Take Control of Your SaaS Security with AppOmni & Salesforce Shield

Unprecedented Visibility

Enable Security, Compliance, and IT to gain visibility into user provisioning, configurations, 3rd party apps, and user access.

Actionable Insights

Keep up with every new security feature and vendor update, and focus on the specific actions needed to keep your Salesforce data secure.

Increased Automation

Eliminate unnecessary tasks from your team's workload. Deliver normalized and enriched events to the data management tools your company uses. Continuously monitor, decrease risks, and prevent configuration drift.

Improved Compliance

Prove and maintain compliance with regulatory standards.

AppOmni & Salesforce Shield Capabilities

AppOmni enhances Shield functionality and streamlines delivery of critical information so Security teams can make informed decisions, faster.

Platform Encryption

Identify encrypted fields, detect misconfigurations automatically based on data type, classification, and attribute. Ensure data has the correct type of encryption for maximum security. Be informed of suspicious activity or user actions that require immediate attention.

Event Monitoring

Deliver normalized events and audit logs to any data visualization or monitoring tool (Splunk, Elastic, Sumo Logic, Exabeam, and more). Provide new information and enriched data augmented with additional context about the events. AppOmni works in parallel with Event Monitoring and does not interfere or render the feature ineffective.

Field Audit Trail

Apply security policies around data and receive high fidelity alerts for critical changes that violate business rules. Investigate access drift to any point in time since AppOmni installation. See how data access has changed over time. Prove and maintain compliance with regulatory standards.

Data Detect

Automatically sync data classifications with AppOmni classifications. Ensure only authorized users have access to sensitive data with data access policies.
