

We built a complete, custom, white-label NFT marketplace solution for Rare Goods, major teams and institutions to launch their own NFT drops. Admins can batch mint their own NFTs on Polygon with custom royalties, set sales and auction parameters, and view relevant data and reports. Users can buy NFTs using credit cards in primary sales and auctions and also re-list and then cash out on an in-platform secondary marketplace. Given the Rare Goods' partnerships and the users they target, we kept compliance and ease of use a top priority. After working with Circle to facilitate support of fiat integrations, we implemented a KYC/AML policy and focused on supporting a very intuitive user interface to make the platform accessible to non crypto natives (who we hope to convert to the dark side 😊).
