

After the collapse of the Terra blockchain, One Planet wanted to migrate NFT's from the Terra blockchain to Polygon. Resulting in not only bringing new life to displaced Terra collections, but also strengthening Polygon's own gaming and NFT ecosystem.

We worked with One Planet to integrate interactions between multi-chain & multi-wallet signatures opening further opportunities for cross-chain interactions.

Everything is 100% on-chain verified, at no point in the entire application do we use a centralized database as the source of truth. We support gasless transactions allowing someone with 0 MATIC to be able to participate and onboard into the new ecosystem.
