26,000+ students  
use our solutions

*Think Beyond is one of the best technology partners I've had the opportunity to work with. When evaluating specific aspects of cooperation, it is worth emphasizing - high involvement at the stage of analyzing the business requirements of the implementation.*

*Focus on a deep understanding of inches and pros that the implemented solution is to support - an effective and creative approach to designing a solution. Striving to implement a tool that is most adapted to the needs, while proposing accurate changes in business processes. This approach avoids creating inefficient tools.*

*Think Beyond proved to be a highly flexible partner, adept at quickly responding to changing needs during the implementation process. Their deep and extensive knowledge of Salesforce, along with their technical expertise, allowed them to create effective tools tailored to the specific needs of our project. Their communication was excellent, with a clear presentation of the implementation plan and the ability to explain technical issues in an accessible way. As a result, both our technical and business teams had a comprehensive understanding of the work being carried out and the expected outcomes. We highly recommend Think Beyond for their outstanding skills and professionalism.*

*All this allowed for the full implementation of an automated e-commerce system for guarding courses and training in just 4 months, within the previously assumed budget.*

*The system is based entirely on Salesforce and Marketing Cloud, including the invoicing system, frontend, back office, and marketing automation.*

*The solution will be developed in cooperation with Think Beyond to include more complex functionalities in the coming months.*
