

About FULL4C,

My name is Sjors Zanders and in my daily work, I am Product Owner at Eurofiber, an international company that provides Business fiber optic services in 4 countries. As a Product Owner I am responsible for translating the strategic business objectives into an IT roadmap and I can manage a team of software developers.

The collaboration with Harjindar Sethi started in 2016, where we both worked for Telfort (KPN). Since the beginning, he has characterized himself as an honest, hardworking person, who is very versatile and is also able to successfully implement complex development processes (in the role of architect and / or developer).

Since the foundation of FULL4C, Eurofiber has been using the service, in addition to Harjindar, 3 other developers of FULL4C have started. I was amazed at how quickly the developers mastered the subject matter. After a period of weeks (where months are common), they were able to pick up items from the roadmap independently and successfully implement them.

The technical knowledge is of a very high level. The developers of FULL4C are versatile. This means that in addition to Salesforce Admin work, they can also develop and implement complex custom solutions. This can be in Salesforce (Apex/JavaScript code), but also (.NET) API solutions running in Microsoft Azure.

Finally, I would like to mention that the developers of FULL4C are constantly trying to improve themselves. They are positively critical of their own implementations and learn from the feedback given internally or externally. This is also reflected in the Velocity (development speed), which still shows a line up. I can therefore wholeheartedly recommend FULL4C as a professional party to work with.

Kind regards, Sjors Zanders
