# How we work

**Attention CRM Consulting is helping its clients to acquire new customers and to increase the benefits of the cooperation with the existing customer base in both – business to business and business to consumer environments. We are executing business and information technology consulting projects to improve marketing, sales and service processes at companies in several industries.**

**SERVICES** Our services portfolio includes blueprint analysis, strategy consulting, project planning, process planning, software implementation, change management, education, support, continuous business consulting after go live, offshore technology consulting.

[ 4 ]

**BACKGROUND** Our knowledge base is built on working CRM practices of global and local companies, processes and logic of several leading CRM software we know plus our own business process and project management innovations. We believe continuous, intense communication, flexibility and professional delivery will make a project successful.

# How we work

**SOFTWARE** We are cooperating and doing projects with all the globally leading CRM software: Adobe, Microsoft Dynamics CRM, Oracle, salesforce.com, Teradata and several smaller practical tools. Majority (90%) of our projects are salesforce.com.

**ATTENTION SOFTWARE** We develop add ons for salesforce. Smart Meeting Minutes enables users to create meeting minutes documents within salesforce, generate pdf version to send, and automatically send and track agreed actions/tasks. Attention Data Loader is a simple middleware, which supports load data from external systems to salesforce.

[ 5 ]

**METHODOLOGY** We combine waterfall and agile methodologies. Most of our projects are done in two key phases: a very short initial waterfall implementation phase (resulting in fast go live), and a longer agile evolutionary phase (resulting in user acceptance and system processes streamlined with real life). We consciously invent our methods to improve project efficiency.
