

Private Patients Solution

Manage Your Private Patients Unit with Salesforce

Our Private Patients Unit solution provides all the tools you need to promote and manage your services.

How it works

Our pre-built solution provides a standard set of features that allow you to promote your services to potential referrers, manage enquiries and referrals, manage your patients' treatment paths and manage your clinicians' practicing privileges, compliancy and reviews.

We work with you to understand your requirements and advise on how best to use the pre-built functionality to meet your needs. We can easily configure the solution to meet your specific needs, including integrations and tailored workflows.

Your stepped journey

Discovery

Explore key objectives and needs.

Insight Check

Build

Including integrations and more complex flows, if required.

Validation

Training and Go-Live

Training your users and supporting the transition to live service.

Consensus

Support

Ensuring you get the support you need and to help improve your solution.

The benefits
