

## About SGS

Headquarters: 6817 Southpoint Pkwy Ste 2104, Jacksonville, FL  
Offices in Texas, Virginia, and Tallahassee.  
Company Founded in 2003  
Website: [www.sgstechnologies.net](http://www.sgstechnologies.net)

Our aim is simple and that is to develop technological solutions through software or staffing that benefit our clients, the tech community and the many lives that come in contact with SGS.

## Current Salesforce Projects

The project for **Florida Fish and Wildlife Conservation Commission** is a multi-faceted project involving two areas of the Government Agency. The **FWC** also introduced a groundbreaking public-private partnership initiative called the Florida Youth Conservation Centers Network (**FYCCN**).

We are helping both entities solve business challenges via salesforce products and beyond. Our initial interaction with FWC was our implementation of .NET Application. The FWC relationship has flourished due to our client focus and fulfilling our obligations on time, and on budget.

### FYCCN

Portal for camp registrations with real-time availability, payment processing, and tailored program recommendations.

### FWC - Volunteer and Event Management System

Tracks volunteer applications, event management, automated onboarding, scheduling, and role-based access control.

### FWC - Wildlife Incident Management

Real-time species tracking with automated incident reporting, interactive dashboards, and ADA accessibility.

### FWC - Hunting and Game Management

Facilitates hunter safety courses, registration for mentored hunts, and certification management.

The Project with **Crowley Maritime Corporation** (3.5 Billion in Revenue): Crowley, founded in 1892, is a privately-held, U.S.-owned and operated logistics, marine and energy solutions company serving commercial and government customers. **SGS** is helping build a unified platform for container allotment and resource management using **Sales Cloud, Marketing Cloud, Service Cloud, and MuleSoft integrations**. This relationship began with our assistance via IT Staffing.

## Forward Looking

There are several other corporations and government entities that we have assisted in the development of customized software. Part of becoming a Salesforce Partner and attending DF 24, was because SGS is steadily uncovering opportunities to deploy salesforce capabilities.

We want to expand the regularity of that occurrence. We are a nimble and innovative organization with the ability to scale, implement and manage extremely complex tasks. Included but not limited to the following:

- ⊕ **Sales Cloud, Service Cloud, Financial Cloud Community Cloud, Analytics Cloud, Data Cloud**
- ⊕ **Tableau, CPQ, Einstein AI , Slack and Agent Force**
- ⊕ **Apex code, Lightning Platform, Lightning Web Components**
- ⊕ **Integrations (SOAP/REST, MuleSoft), Custom Reports**
- ⊕ **Lightning Flows, Security & Data Models, Asynchronous Jobs**
