

Salesmost Volunteer White Paper

Market Demand Analysis

Organizational Volunteer Management Pain Points

In the current nonprofit management environment, volunteer recruitment and management have become key issues that need urgent attention. Many nonprofit organizations face the following challenges:

- **Recruiting Suitable Volunteers:** When an event requires volunteers, efficiently recruiting and matching the right volunteers is a challenge. Many nonprofit organizations struggle with volunteer shortages or skill mismatches, especially during high-demand or repetitive events.
- **Volunteer Information Management:** As the number of volunteers increases, managing their personal information, skills, certifications, and participation records becomes increasingly cumbersome. Without an efficient management system, data may be duplicated or lost, leading to improper task allocation and low operational efficiency.
- **Task and Time Management:** Coordinating multiple volunteers to perform different tasks, particularly considering their availability, skills, and experience, makes task management complex. Without systematic scheduling tools, it's difficult to assign tasks efficiently and adjust schedules flexibly.
- **Volunteer Performance Evaluation and Feedback:** After an event, volunteer performance evaluations and participant feedback collection are often overlooked. However, this feedback is crucial for improving future volunteer engagement and event effectiveness.

Target Audience

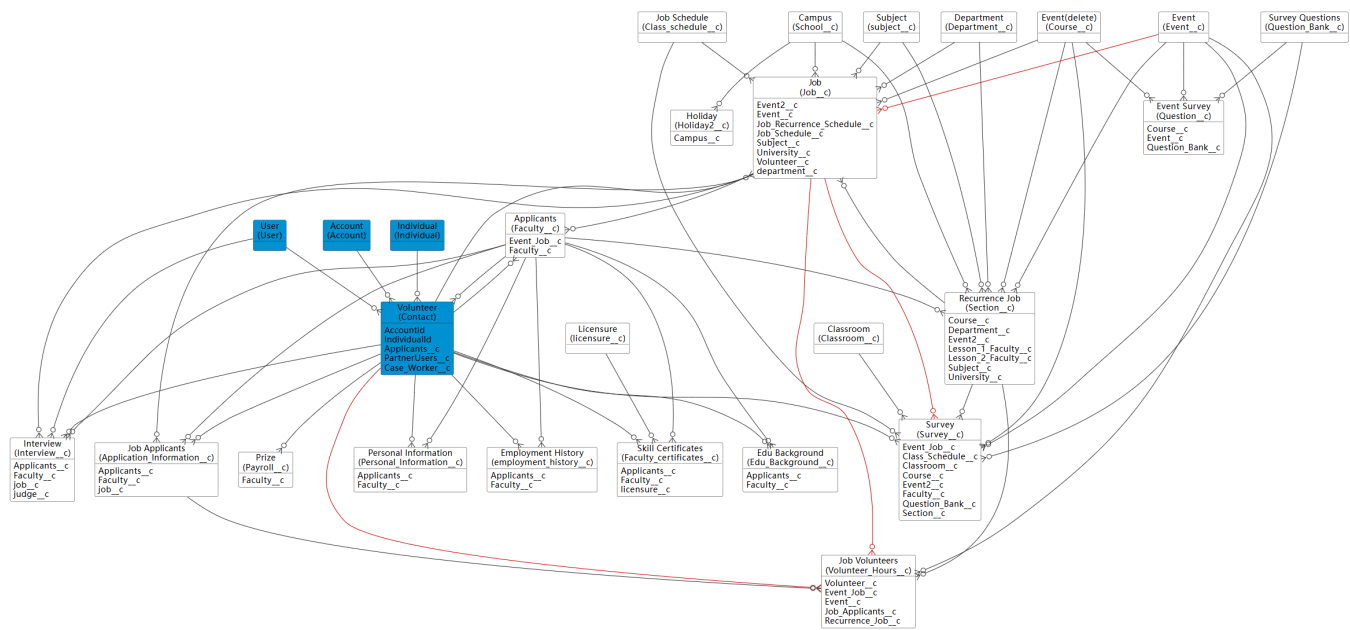

This product is mainly aimed at the following nonprofit organization clients:

- **Charitable Organizations:** These organizations rely on volunteers for service and support. Through efficient volunteer management, they ensure optimal use of resources and enhance the overall impact of their events.
- **Social Service Agencies:** Such as community service centers, elderly care organizations, etc., these agencies typically require large numbers of volunteers to assist in daily operations and special events. Simplifying the recruitment and management process can improve service quality and efficiency.
- **Public Health and Medical Organizations:** For example, the Red Cross, public health projects, etc., these organizations rely on a large number of volunteers to provide health consultations, vaccination services, and more. Efficient volunteer management tools can significantly streamline their operation

Product Feature Overview

ERD Diagram

Salesforce Entity-Relationship Diagram

The main features of the product are as follows:

Volunteer Recruitment

- **Job Creation and Posting:** Organizations can quickly create job positions and use the one-click posting feature for duplicate positions, allowing them to publish multiple similar job listings in bulk and avoid repetitive actions.
- **Volunteer Registration and Information Submission:** Volunteers can register online and fill in their personal information, upload certifications, skills, and other relevant materials to ensure they meet the job requirements. The system provides easy-to-use data entry and verification features.
- **Filtering and Matching:** Organizations can manually filter suitable volunteers based on criteria such as certifications, skills, and experience to ensure a good match between the job position and the volunteer.
- **Interview Scheduling and Feedback:** Interview schedules can be automatically notified to volunteers through the system, supporting online interviews and real-time feedback to ensure an efficient and smooth recruitment process.

Volunteer Management

● **Evaluation Survey**

The evaluation survey feature in volunteer management allows organizations to collect feedback on volunteer participation, assess their performance, and review their event experience after the event ends. Through anonymous surveys, organizations can gather valuable insights and continuously optimize future volunteer management and event planning.

● **Volunteer Search**

The volunteer search feature allows administrators to efficiently filter and find suitable volunteers based on various conditions. Administrators can perform precise searches across multiple dimensions, such as experience, position, skills, certifications, available time, and number of available days, to quickly find the best-matching volunteers. This feature helps administrators allocate tasks more effectively, ensuring that each position is filled by the most suitable volunteer.

● **Bulk Email Sending**

The bulk email feature allows administrators to filter and send bulk emails based on activities, positions, or volunteers. Administrators can select specific activities or positions, automatically filter volunteers that meet the criteria, and send customized email notifications with one click. This feature significantly improves communication efficiency, ensuring that information is timely communicated to relevant volunteers and avoiding the hassle of contacting each volunteer individually.

● **Calendar**

The calendar feature provides administrators with a clear timeline view, allowing them to view all relevant activities and position arrangements within a specified time range. With the calendar, administrators can easily see the exact time of each activity and position and make adjustments as needed. The system supports drag-and-drop adjustments, allowing administrators to quickly modify event or position schedules by simply dragging, greatly enhancing flexibility and efficiency in time management.

Event

When creating an event, the following fields are primarily involved:

●**Event Status:** Such as Planned, In Progress, Completed, or Canceled.

● **Desired Number of Volunteers:** The total number of volunteers needed for the event.

●**Number of Volunteers Still Needed**: The remaining volunteers needed, calculated as = Total Required Volunteers - Confirmed Volunteers.

completed by volunteers, which is the sum of the completed hours for all jobs under the event. This requires the job attendance to be filled in, and the status must be marked as "Completed."

Recurring Job Positions (Recurrence Job)

If a nonprofit organization frequently holds recurring events, such as recruiting volunteer coordinators every Friday, it can first create a recurring job. For example, from January 1, 2025, to October 1, 2025, recruit 1 coordinator every Tuesday and Friday from 10 AM to 5 PM. Then, by clicking "Generate Jobs" in the top right corner, the system will batch-create the positions all at once.

When creating a recurring job, the following fields are primarily involved:

- Start and End Date:** For example, January 1, 2025, to October 1, 2025.
- Associated Event**
- Start and End Time Within the Day:** For example, 10 AM to 5 PM.
- Job Title:** For example, Coordinator.
- Number of Volunteers to Recruit:**The number of volunteers needed each time, e.g., 1 person.
- Location:** For example, Los Angeles.
- Frequency:** For example, weekly.
- Days of the Week:** For example, Tuesday and Friday.
- Required Skills:** For example, computer skills, event planning.
- Time Zone:** For example, Eastern Standard Time (EST).

Nonprofits can create one-time job positions under an event either through the batch creation process mentioned above or by individually creating positions. The related list for a job includes applicants, interviews, job volunteers, job surveys, and job history.

●**Start and End Date:** For example, January 1, 2025, to January 1, 2025.

- **Start and End Time Within the Day:** For example, 10 AM to 5 PM.

•**Number of Volunteers to Recruit:** The number of volunteers needed each time, for example, 1 person.

•**Number of Confirmed Volunteers:** The number of volunteers who have confirmed to take part.

•**Number of Completed Hours:** The total number of hours completed by volunteers for the job, which must be filled in the job attendance and marked as "Completed."

- **Location:** For example, Los Angeles.

•**Status:** For example, Published, In Progress, Completed, or Canceled.

There are several ways to assign volunteers to positions. Applicants who pass the interview become official volunteers for the position. Additionally, if an event requires volunteers, a volunteer can be selected directly from the job. If a manager wants to search for existing volunteers to fulfill a position, they can use the "Find Volunteers" plugin to search for and match volunteers to the job. For example, searching for active volunteers with computer skills who are available during the week, and then selecting a specific person like Jack Davis to assign to the "Hiring Director" position with the ID J-000011.

- Current status of the volunteer (available: active)

- Volunteer skills: For example, a recruitment coordinator role may require computer skills.

Mass Email

The mass email feature allows administrators to filter and send bulk emails based on events, positions, or volunteers. Administrators can select a specific event or position, automatically filter volunteers who meet the criteria, and then use the system to send customized email notifications with one click. This function significantly improves communication efficiency, ensures that information is delivered promptly to the relevant volunteers, and avoids the hassle of manually contacting each one.

Bulk email options include:

- Event: Send bulk emails to volunteers from a specific event.
- Job: Send bulk emails to volunteers for a specific job. For example, if a position is canceled tomorrow afternoon, volunteers for that position will be notified.
- Volunteer: Directly select multiple volunteers to send bulk emails.

Subject

Survey

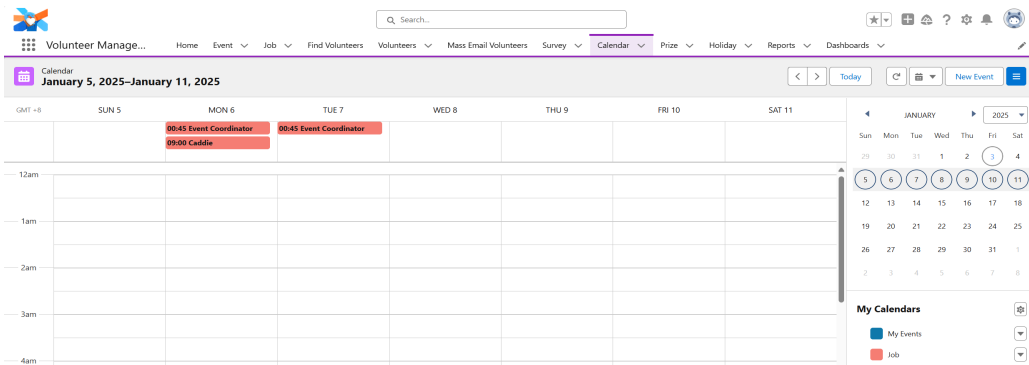

The survey feature allows event participants to provide feedback on positions through questionnaires, facilitating improvements. It includes various ratings and comments sections for detailed feedback.

Calendar

The calendar feature provides administrators with a clear timeline view, allowing them to view all related activities and job schedules within a specified time range. Through the calendar, administrators can easily check the specific timing of each activity and position, and adjust as needed. The system supports drag-and-drop adjustments, enabling administrators to quickly modify the schedule of activities or positions, greatly improving time management flexibility and efficiency.

Operations on the Calendar:

- Drag and Drop to Change Job Time Slots:** Administrators can drag and adjust the time range of a job directly on the calendar.
- Create Event:** New events can be created directly from the calendar interface.
- Hide Jobs or Events in the Calendar:** Click the blue/red icons to hide the corresponding job or event from the calendar view.
- Edit Event or Job Details:** Administrators can click on an event or job to edit its details, such as timings, location, or volunteer requirements.
- View by Specific Time Range:** In the upper-right corner, users can select specific time ranges to display, including options like today, navigating forward/backward, or directly selecting the range on the calendar.

Holiday:

Record Holiday Periods: Administrators can mark holidays in the system to automatically avoid scheduling jobs during these periods. This ensures that jobs are not posted or assigned on holidays, reducing conflicts with volunteer availability.

Volunteer Management Dashboard Overview:

The dashboard provides administrators with a clear, real-time overview of volunteer status. It includes:

- **Active Volunteers:** Number of currently active volunteers.
- **Volunteer Work Hours:** Actual hours worked by each volunteer.
- **Number of Jobs:** Total jobs, which can be further categorized into ongoing recruitment and completed positions.
- **New Volunteers:** Number of newly registered volunteers.
- **Applicants in Progress:** Number of applicants currently in the application process.

Interview Status: The current status of interviews, including those in progress.

This dashboard gives a concise, comprehensive view of volunteer activities and recruitment progress. Would you like to add any specific features or insights?

Case Study: Improving Service Efficiency through Volunteer Management Platform

Background

A client, a U.S.-based nonprofit organization focused on community development and environmental projects, faced challenges with volunteer recruitment, management, and feedback as their activities expanded. They needed to optimize these processes to improve efficiency.

Current Situation & Challenges

- Difficulty in Volunteer Recruitment & Matching**

Volunteers' skills didn't align well with activity needs, affecting the smooth running of events.

- Dispersed Information Management**

Volunteer data was scattered, causing delays in updates and inefficient task allocation.

- Confusion in Task Allocation & Time Management**

Volunteers' availability didn't match activity requirements, leading to wasted resources.

- Lack of Feedback Mechanism**

After events, there was no system for collecting feedback or evaluating volunteer performance, hindering future improvements.

Solution

The client implemented the "Volunteer Management Platform," which enhanced management efficiency through the following features:

- Precise Recruitment & Matching**

The system matched volunteers with the right skills and experience to the activity requirements, ensuring appropriate volunteer participation.

- Centralized Volunteer Information Management**

All volunteer data and participation records were stored in a unified system, ensuring information accuracy.

- Automated Task Allocation & Time Management**

The platform used calendar functionality and task allocation modules to automatically schedule volunteer tasks, reducing manual intervention.

- Real-Time Feedback & Evaluation**

After events, the system automatically collected volunteer feedback to help optimize future activities and improve volunteer engagement.

Final Results

- Improved Recruitment Efficiency**

Volunteer matching was more precise, reducing recruitment time, especially during high-demand periods.

- Optimized Time & Task Management**

Automation of task allocation minimized conflicts, improving overall event execution efficiency.

- Increased Volunteer Satisfaction**

Feedback and evaluation processes boosted volunteer engagement, resulting in a 40% increase in return rates.

Conclusion

By implementing the Volunteer Management Platform, the client streamlined their volunteer management processes, enhanced event efficiency, and improved volunteer satisfaction, laying a solid foundation for long-term growth.

Why Choose Us?

- Comprehensive Volunteer Management**

Our volunteer management platform offers a complete range of features, including volunteer recruitment, information management, task allocation, and performance evaluation. With an intuitive interface and detailed reports, administrators can track volunteer participation in real-time and make efficient decisions.

- Precise Volunteer Matching**

Our system helps organizations match volunteers with roles based on their skills, experience, and availability, ensuring that each position is filled by the right person, ultimately improving the overall efficiency of events.

- Efficient Task & Time Management**

The platform's automated scheduling and task assignment features intelligently allocate volunteer tasks based on event requirements and volunteer availability, eliminating repetitive tasks and improving task distribution efficiency.

- Powerful Data Analytics & Feedback Functionality**

The data analysis module provides administrators with detailed activity data and volunteer performance assessments, allowing organizations to gain insights into event outcomes and volunteer satisfaction. By collecting and analyzing feedback, organizations can optimize future events and boost volunteer engagement and return rates.

- Flexible Communication & Notification System**

The platform supports bulk email sending, notifications, and reminders, helping organizations maintain timely communication with volunteers. This ensures accurate transmission of event arrangements and task assignments, reducing communication costs and errors.
