

Unleashing Velocity

**A Holistic Guide To
Accelerate IT Ops Delivery &
Achieve Operational Excellence**

EBI LABS

Unleashing Velocity: A Holistic Path to Success

In the rapidly evolving world, achieving velocity requires more than just speeding up processes. It demands a holistic approach that integrates technology, culture, and operations.

At EBI Labs, we believe organizations can achieve both speed and continuous results by fostering collaboration and leveraging innovative tools.

Better Together

"If you want to go fast, go alone.

If you want to go far,
go together."

— African Proverb

We've designed this guide for teams seeking to accelerate growth through IT Operations. We explore holistic approaches that contribute to high performance, including strategic alignment & linking IT objectives to organizational outcomes.

Building Blocks of Speed: The Pillars of Velocity

Alignment

1. Ensure impacted teams are aligned with the Solution, Process, and Expected Value brought to the organization.

Continuous Integration & Delivery

2. Define & vocalize build & release processes. Leverage tools and practices for effective automation.

Achieving high velocity requires a strong foundation built on critical pillars. These pillars include continuous integration and delivery (CI/CD), automation, and monitoring. Each pillar is essential to ensuring that changes can be made quickly and reliably without sacrificing quality or stability.

However, no process or automation is more significant than Alignment. Alignment ensures that the right solution is delivered and achieves the highest probability of success.
