

Don't be fooled - the export doesn't work.

MIGRATING AWAY FROM SHOPIFY

HISTORICAL ORDER DATA: FRIEND OR FOE

Making a move to a new platform can be exciting, but the journey of migrating data can feel like loading a clown car.

While Shopify is a great starter platform, its data can get a little messy when you try to bring it over to a powerful new home like Salesforce Commerce Cloud. While they provide a nifty little export file "for migrating their data," its not the nicely wrapped package with a bow that it seems to be.

That export? Doesn't account for historical multi-currency, taxing, or discount data. And to top it all off, solutions for this kind of migration can be shockingly expensive, leaving you with a huge bill and a big headache.

Rather than letting those valuable details get lost in the shuffle, we have a way to make this transition a breeze!

“Working with the Coordona team is a first in my career. I've been doing this since the DemandWare days and haven't had a migration this easy...ever.”

-SFCC Consulting Partner CEO

Data

Commerce
Cloud

THE CHALLENGES

- Shopify export does not provide all required order history - and no details around discounts, shipping, or taxes!
- No clear method to account for multi-currency or product attributes
- Migrations as a whole are unpredictable - which makes them one of the most expensive parts of the whole project

THE OUTCOMES

- A solution that accounts for ALL the data you need
- A team of data nerds who work with you *and* your consulting team
- A fixed fee price and scope for your migration - predictability!

FOR MORE INFORMATION, PLEASE REACH OUT AT HELLO@COORDONA.COM

In a world where data silos are more common than free pizza Fridays, we bridge the gaps, unleashing insights and laughter along the way. We're the data integration wizards, here to save your sanity (and spreadsheets) from information overload.

For more information, bad data puns, or custom solutions, please contact hello@coordona.com

INCLUSIONS

An End-to-End Migration Solution

The Coordona Data Nerds are here to help to keep your migration from becoming a migraine. Working with Coordona team, you will have a shepherd for your data - from extraction, to mapping, to testing, to cut-over, our nerds will work with your Salesforce consultants, your eCommerce gurus, and your IT experts to make sure your data ends up complete and in the correct place.

As part of your engagement, you will receive regular updates - and homework assignments! - from your project manager to keep things moving along. And that same project manager? Also coordinating with the rest of your SFCC project to stay aligned.

Included Objects

The migration queries the following objects: Customers, Orders, Return Orders, Products, Product Recommendations, Price Lists, Price List Prices. The details for currencies (if properly configured for historical data), discounts and taxes are also included.

Our migration will create your products, a standard price book, and bring in your order history to the SOM model. Destination objects written to include:

Account (Person Account)
Customers
Product2
PriceBook
PricebookEntry
Order
OrderDeliveryGroup
OrderItem
OrderItemTaxLineItem
OrderItemAdjustmentLineItem

OrderSummary
Shipment
Products & Product Variants
Product Images
ShipmentItem
ReturnOrder
ReturnOrderLineItem
ReturnOrderItemAdjustment
ReturnOrderItemTaxLineItem

Got variants? An order history over 250k records? Custom objects? No problem. Let's talk to see how we can customize this migration package for your brand.

THE COST

\$20,000 fixed fee

Customizations available

TIMING

With all pre-requisites in place, end-to-end work can be done in as little as 3 weeks.

PREREQUISITES

SYSTEMS AND SUCH

- A configured SOM (Salesforce Order Management) system with a Standard Pricebook and default shipping methods configured
- A SFCC instance with Person Accounts properly enabled and configured

CLIENT TIME COMMITMENT

- Expected involvement of 2-4 hours per week during Discovery and Testing/Deployment periods
- Readily available during all project stages for questions and clarifications
- Commerce Cloud consulting team should expect 2-4 hours of time per week to support configuration questions, as well as perform end-to-end testing. Fixed cost does not include time required from other consulting parties.
